NASA Health & Air Quality Program Overview

John Haynes
Program Manager

EARTH SCIENCE APPLICATIONS WEEK 2021

Health and Air Quality

Major Partners include International (e.g., GEO, WHO, UNICEF, PAHO), Federal (e.g., CDC, EPA, NIH, NOAA), State (e.g., South Dakota, California, Texas), and Private sectors (AER, Inc.).

- NASA's Health & Air Quality Applications Area supports the use of Earth observations in air quality management and public health, particularly regarding **infectious disease and environmental health** issues.
- The area promotes uses of Earth observing data and models regarding **implementation of air quality standards, policy, and regulations** for economic and human welfare.
- The area addresses issues of **toxic and pathogenic exposure and health-related hazards** and their effects for risk characterization and mitigation.
- The Health & Air Quality Applications Area also addresses **effects of climate change on public health and air quality** to support managers and policy makers in their planning and preparations.

Saharan Dust Plume
San Juan, PR

Credits: NASA/Pablo Méndez-Lázaro

Forecasting Poor Air Quality Events in the Caribbean

Saharan dust storms crossing the Caribbean adversely impact air quality and human health. Robust applied research and community partnerships were developed in Puerto Rico to build an air quality forecasting tool that will inform policy decisions, educate the public on health risks related to dust storms, and safeguard population health.

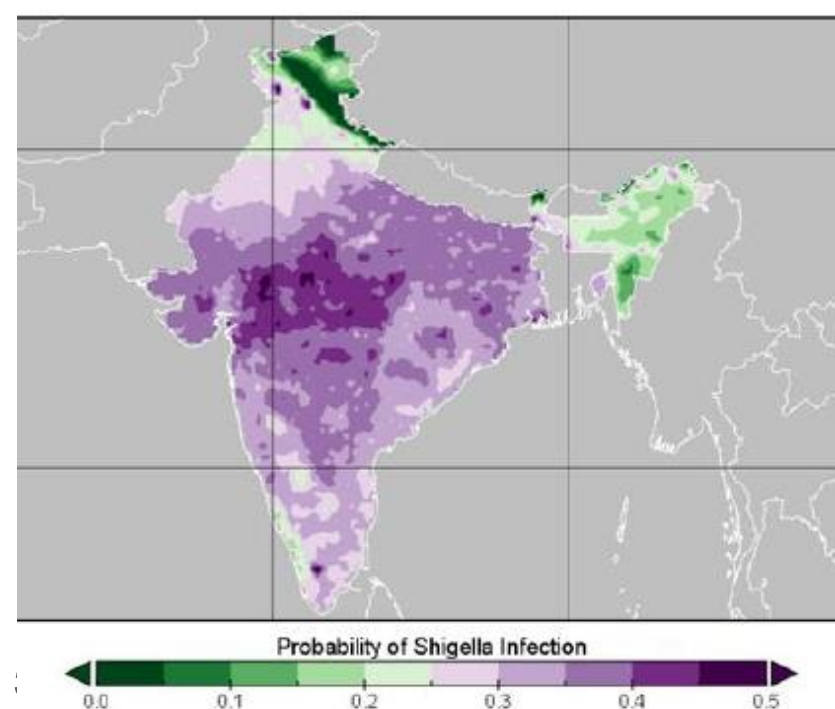

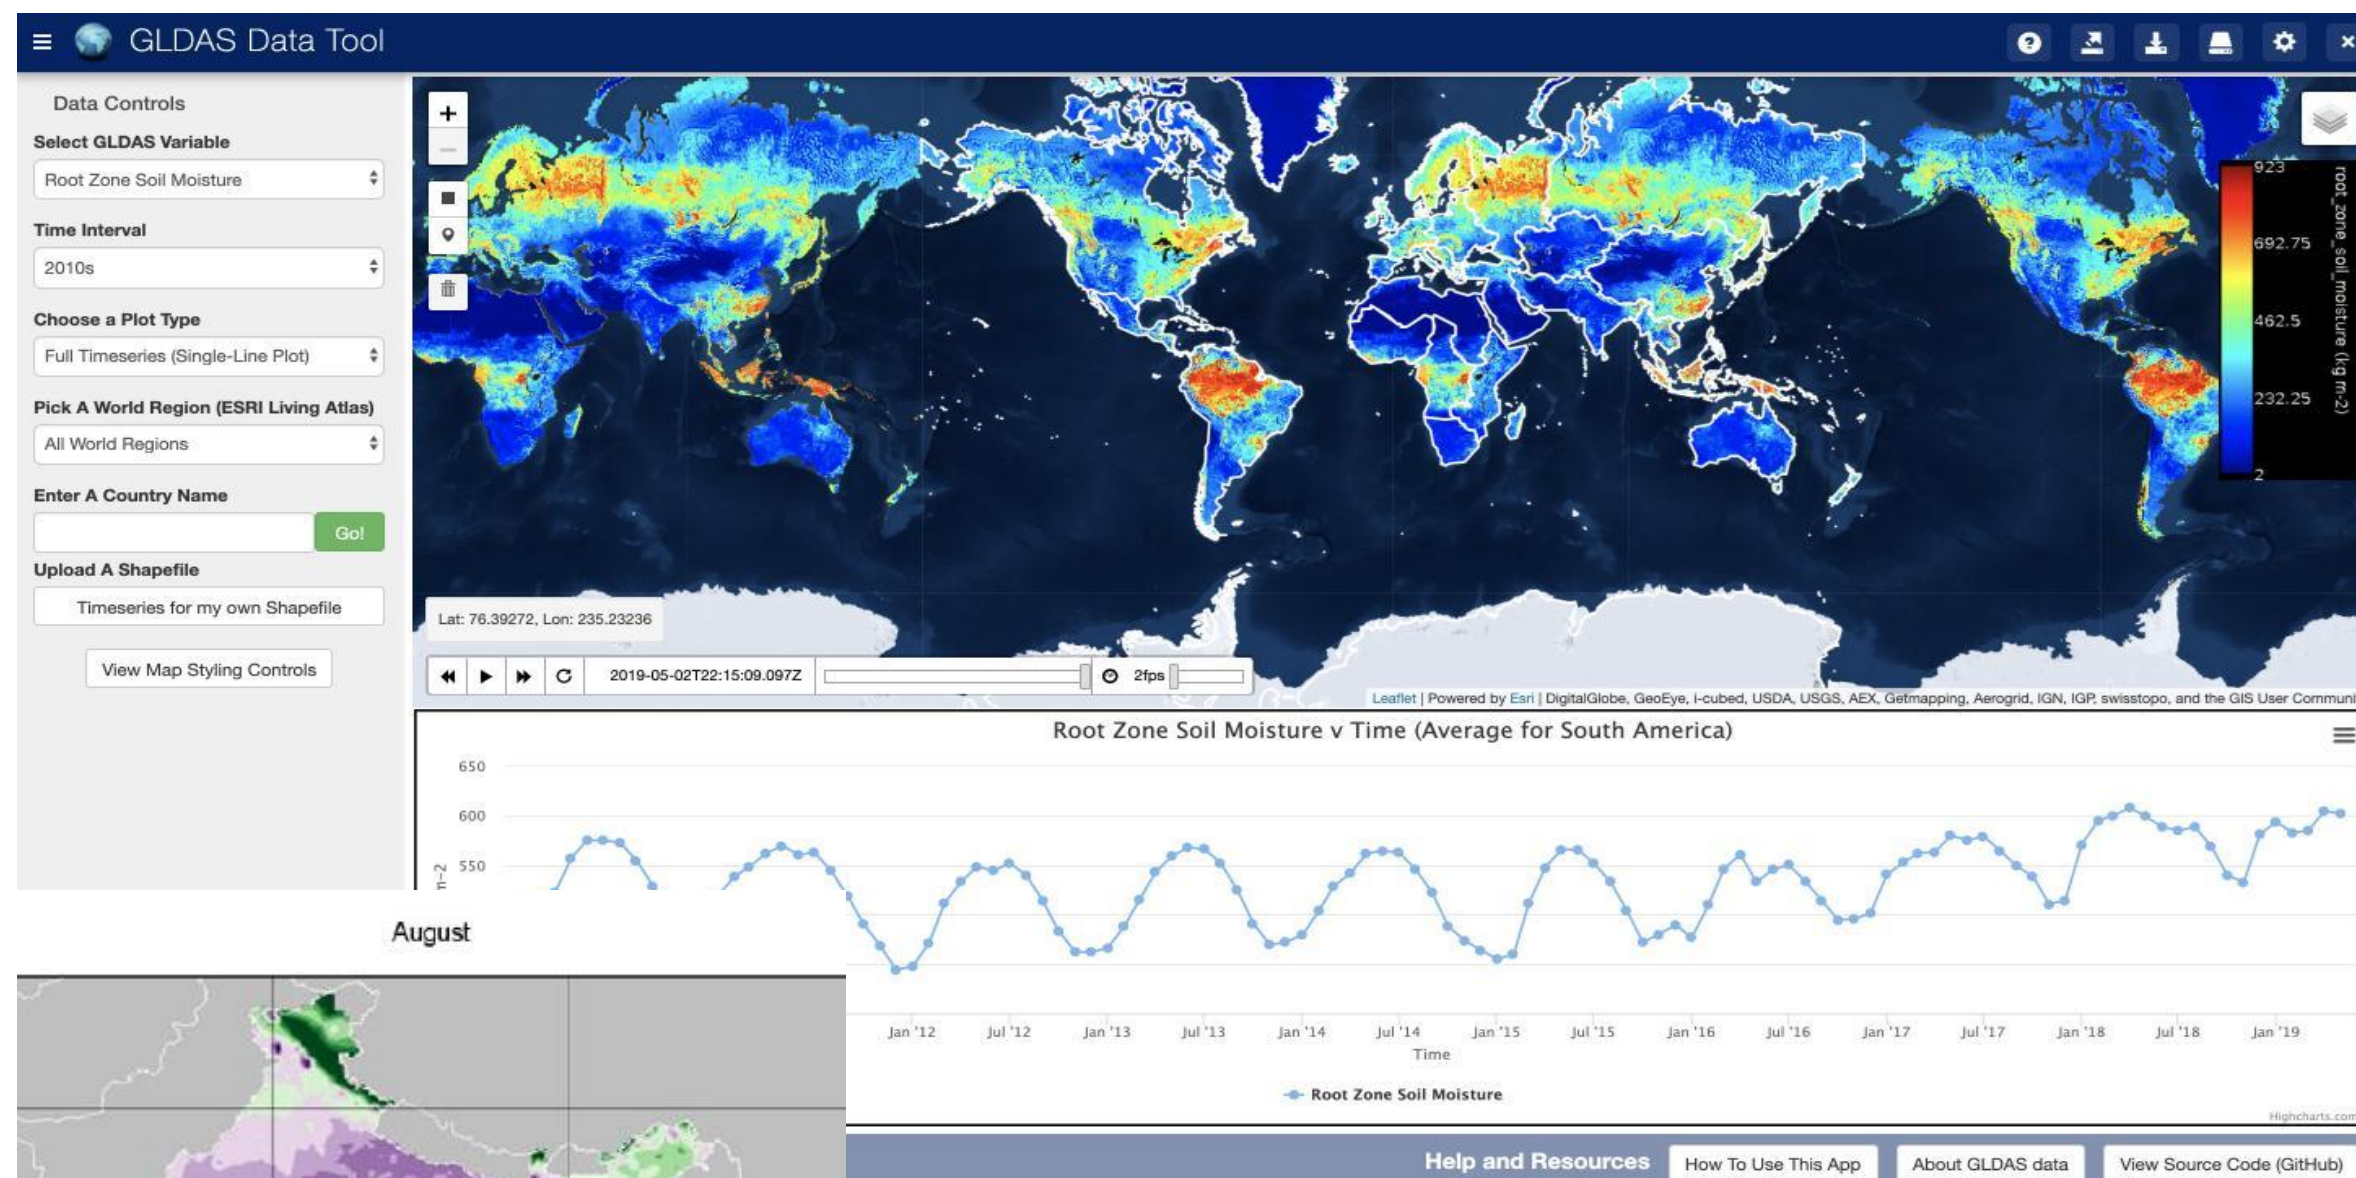

EARTH SCIENCE APPLICATIONS WEEK 2021

Environmental Determinants of Gastrointestinal Diseases

Satellite observations of temperature, soil moisture, and precipitation have been used to understand global rates of gastrointestinal illnesses. Similar data are now being used to investigate potential environmental factors that may influence COVID-19 transmission.

Connecting Earth Observations to Emergency Department Visits following flooding

J Gohlke, B Ramesh,
S Swarup, B Zaitchik

EARTH SCIENCE APPLICATIONS WEEK 2021

Health and Air Quality

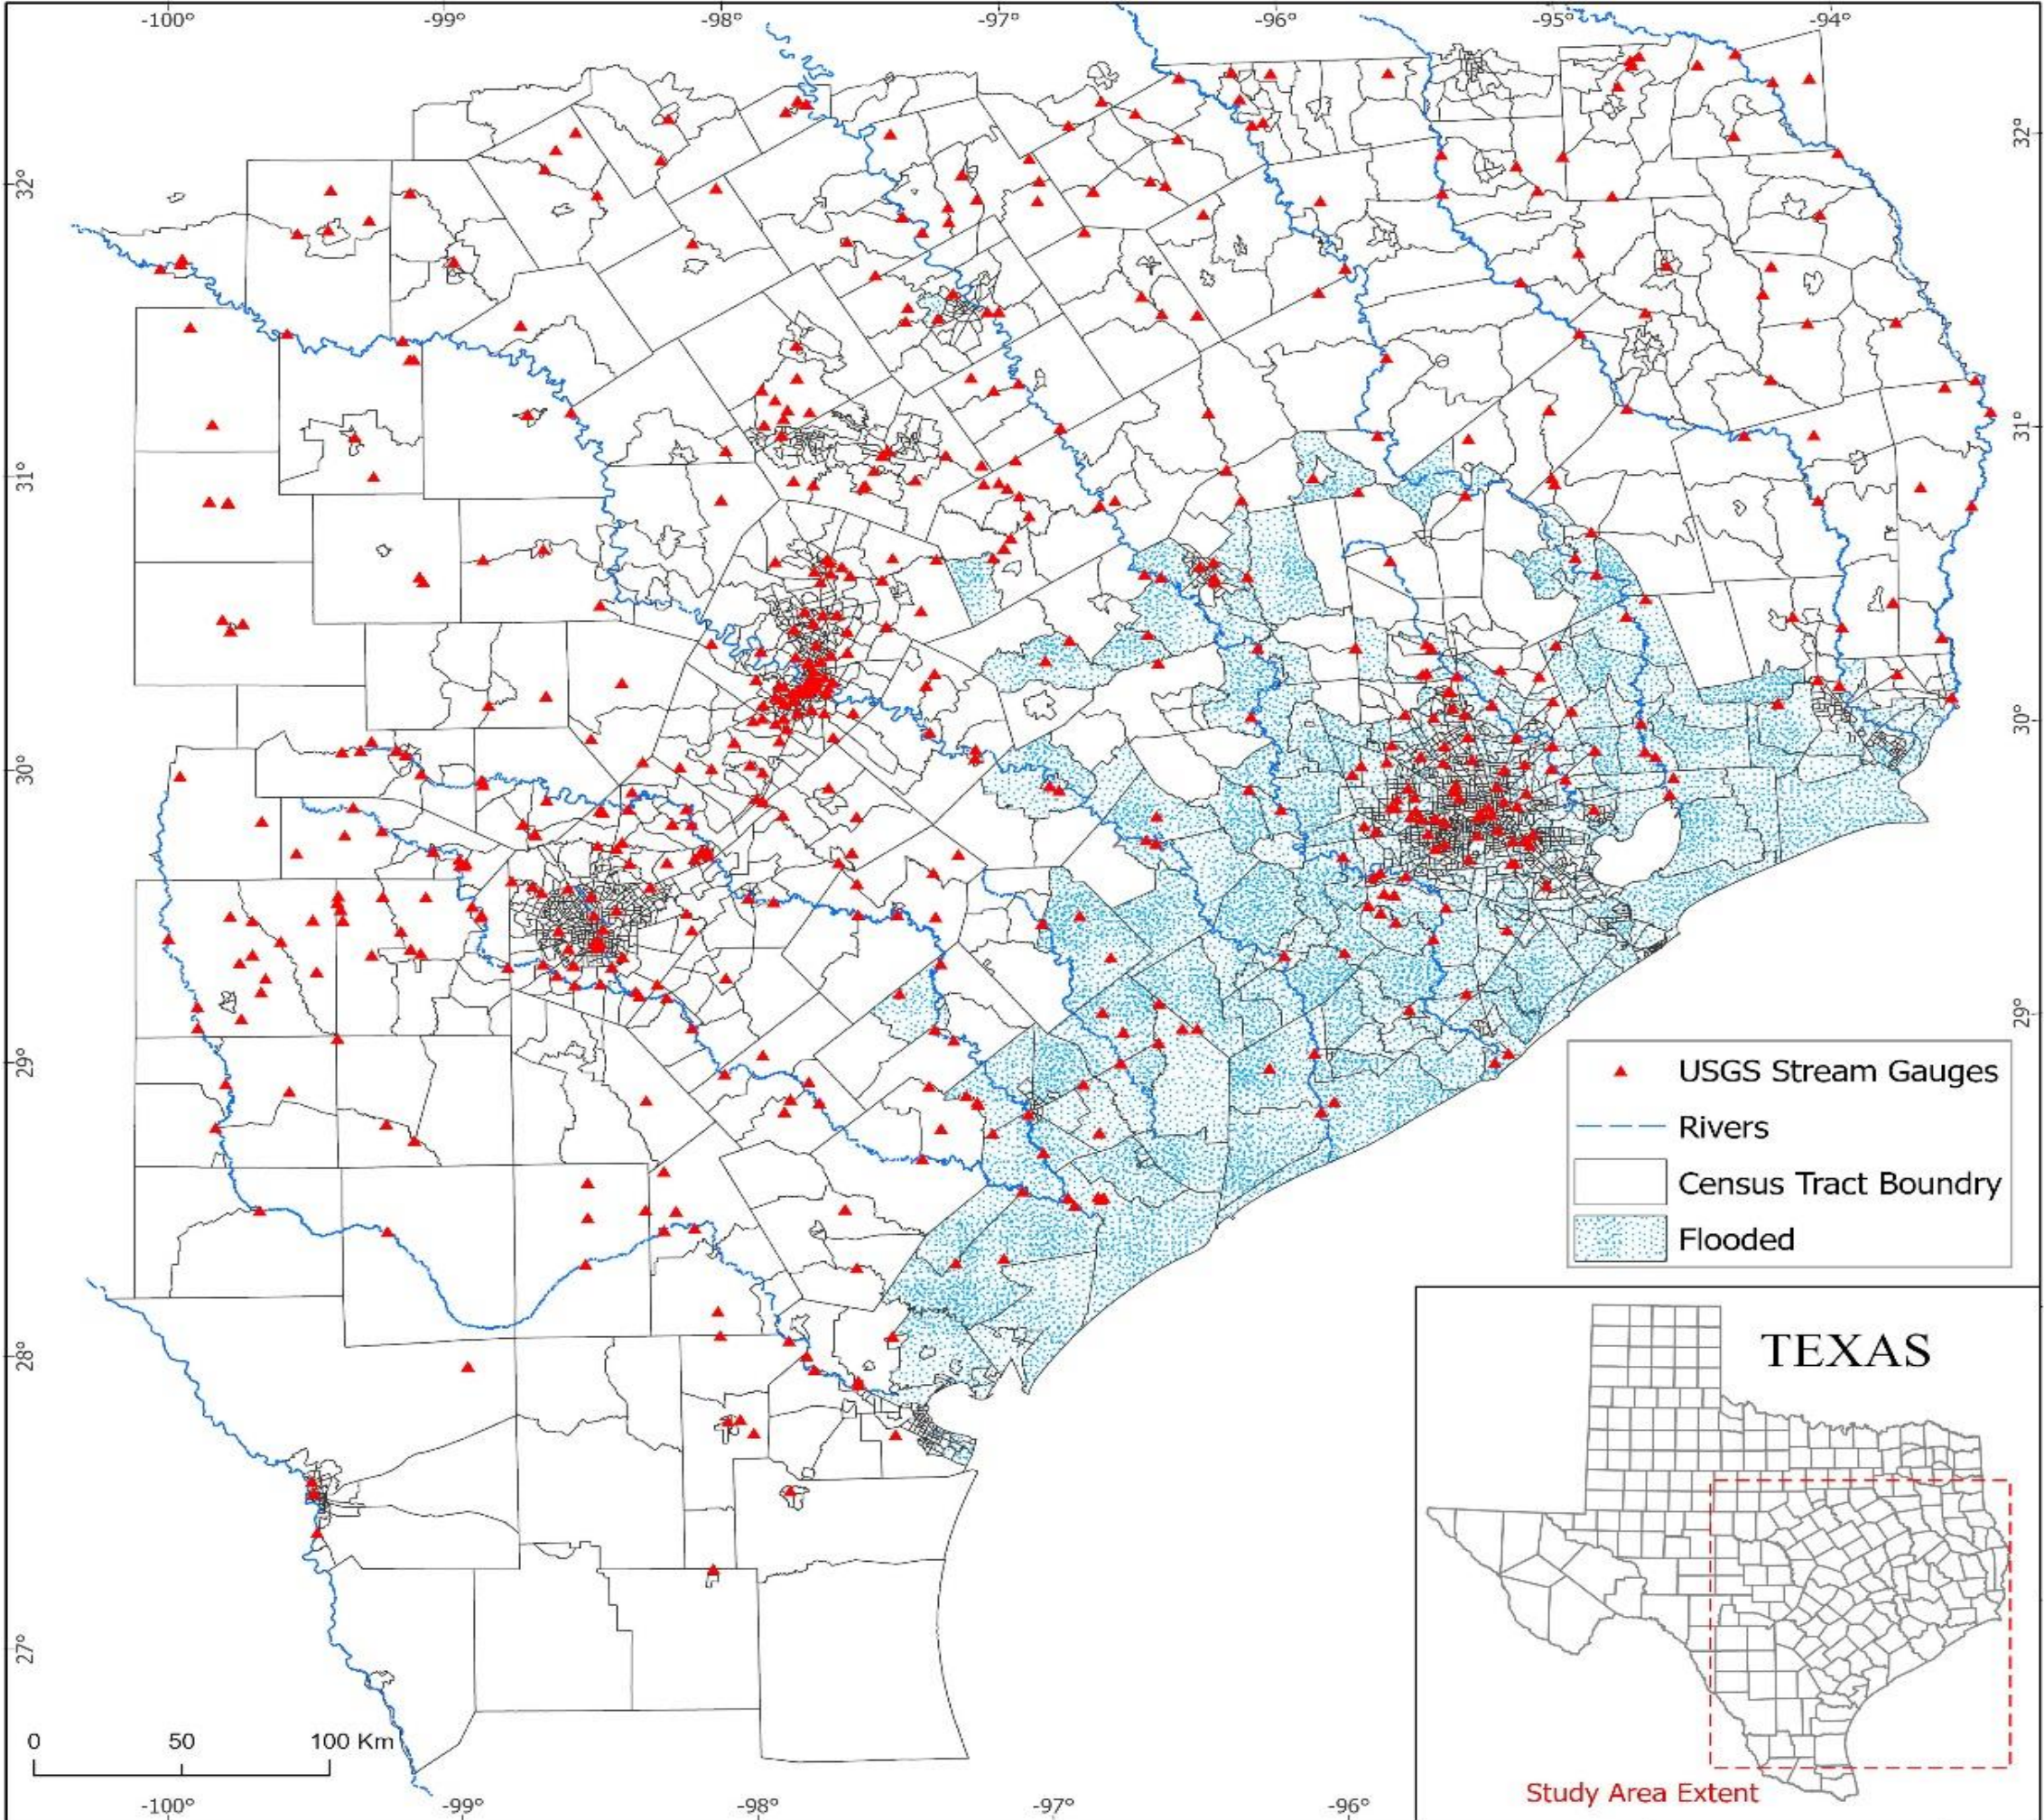

Inundation Data from
Dartmouth Flood Observatory

Can EO data improve health related responses during flooding events?

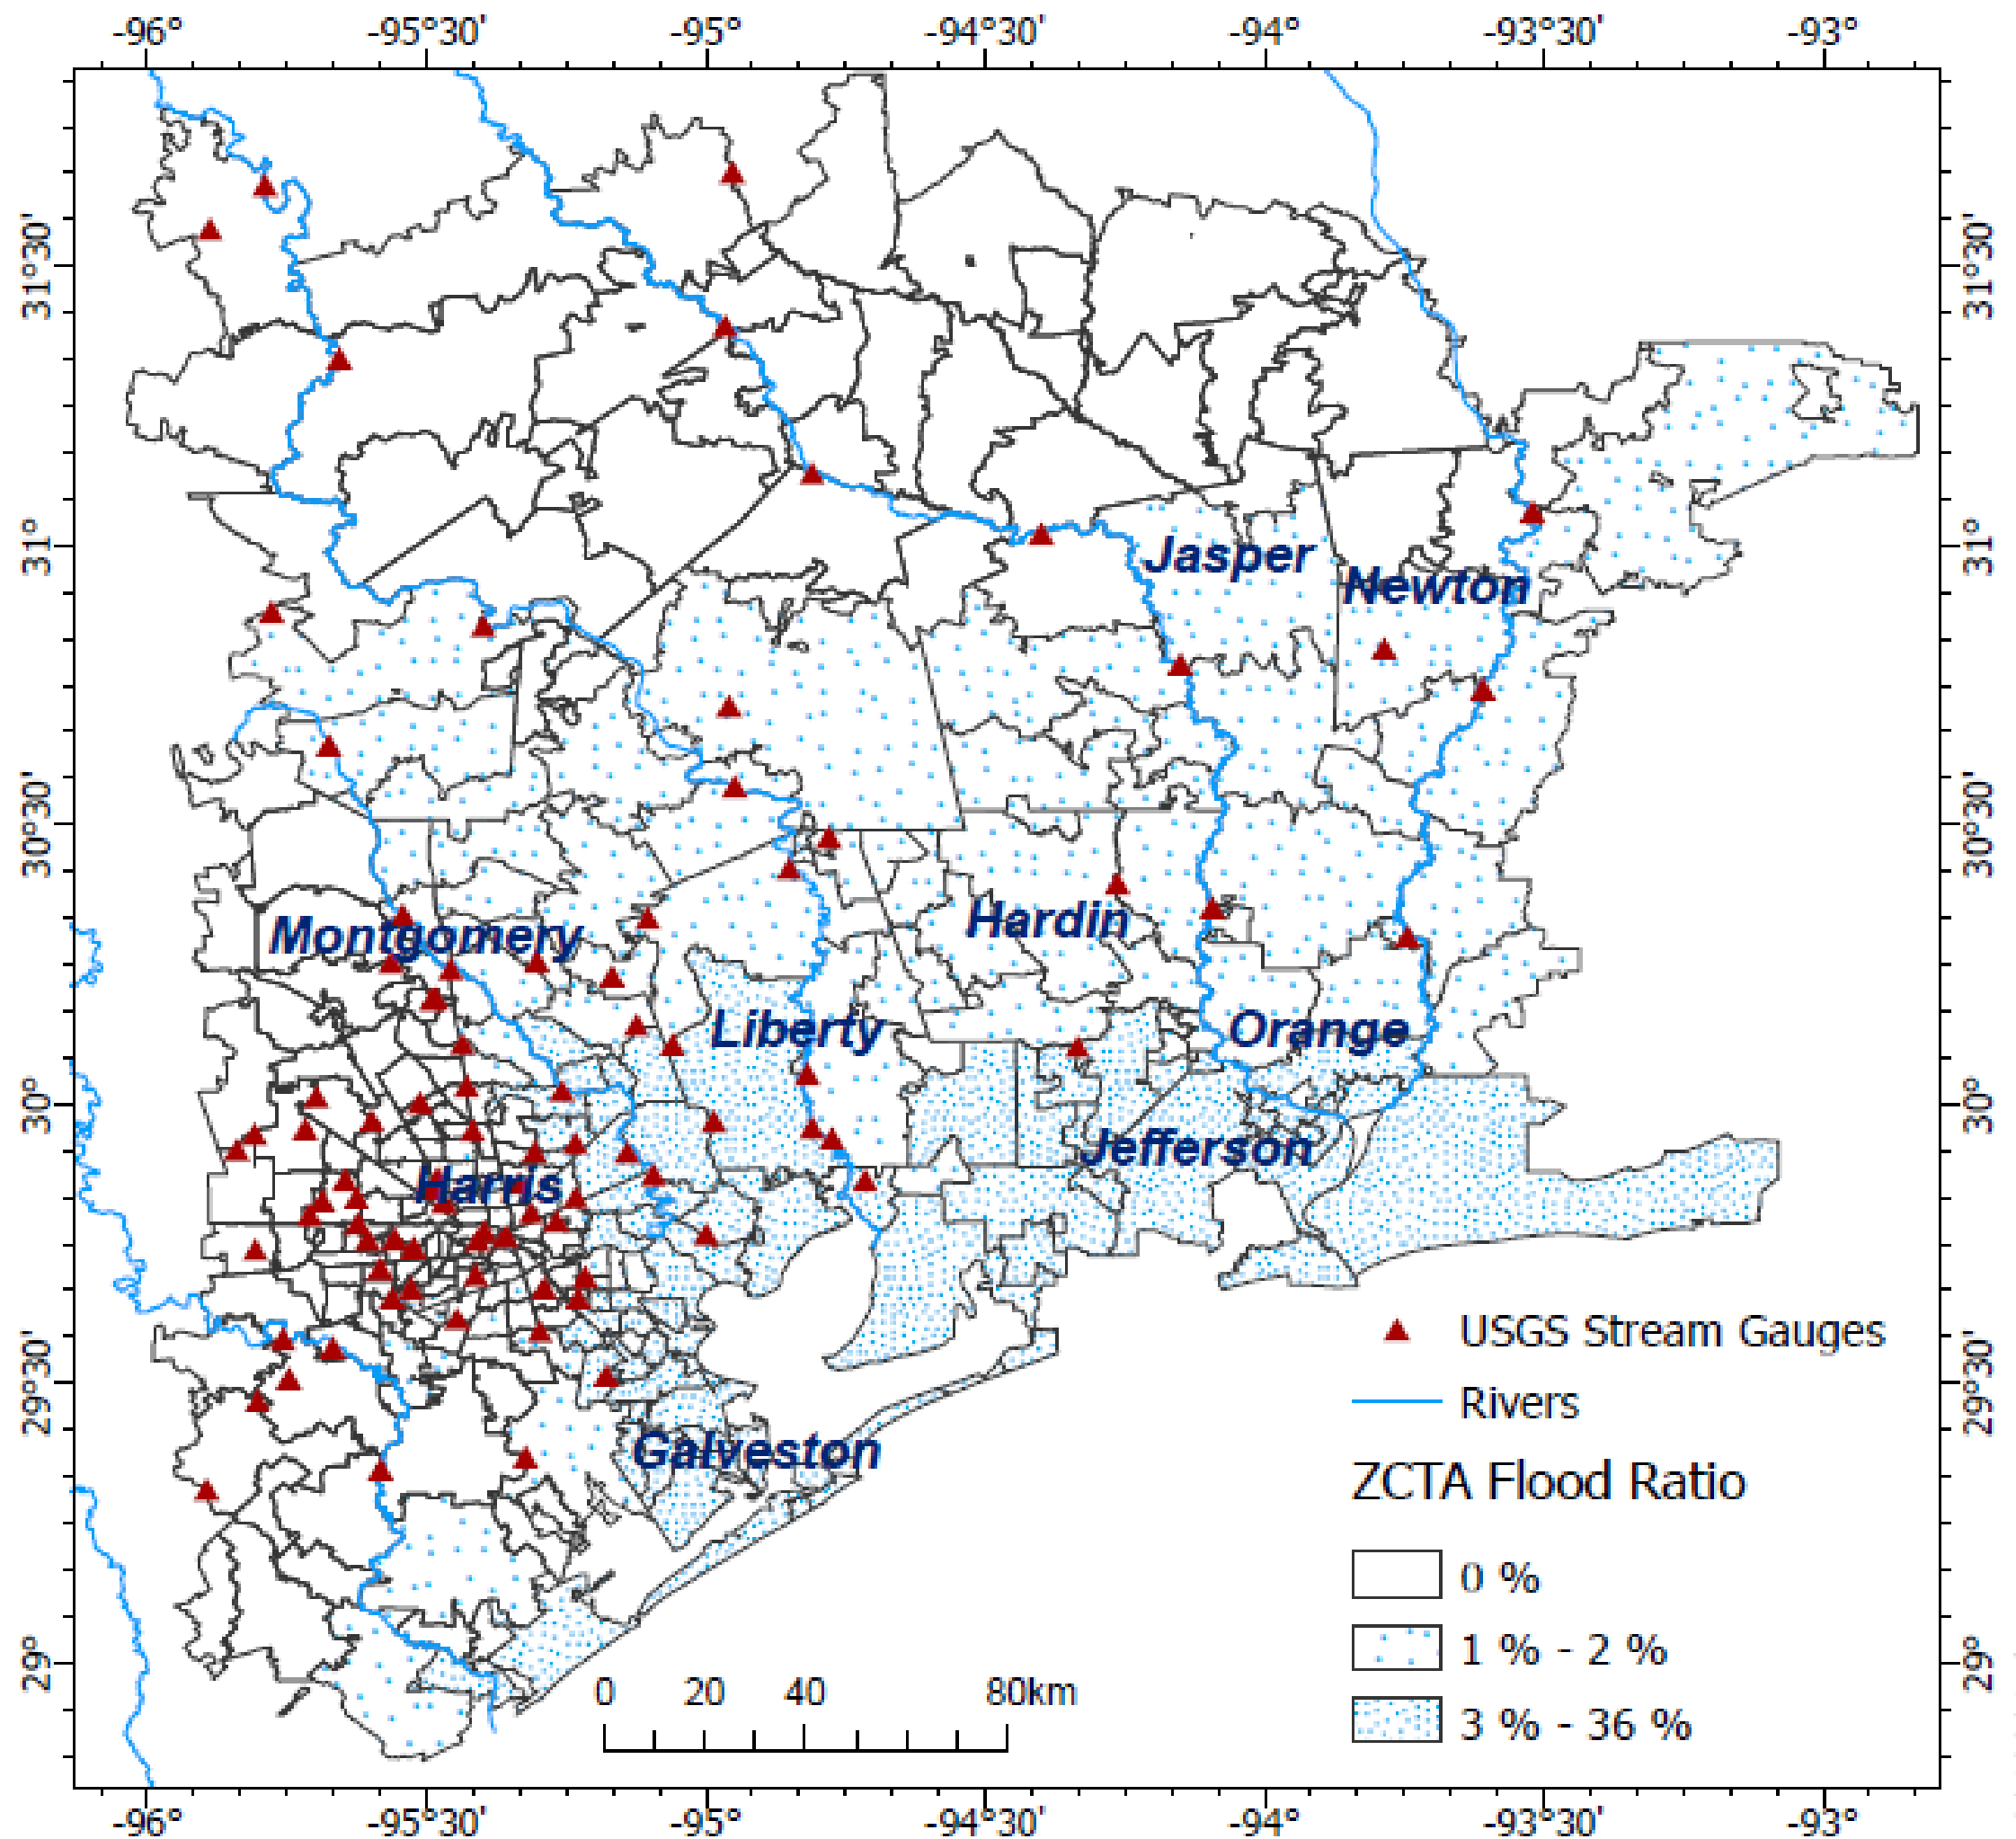

- Inundation and stream gauge data
- ED visit and syndromic surveillance during Harvey and Imelda
- CDC Social Vulnerability Index

Using EO to define spatiotemporal flooding extents during Hurricane Harvey (census tract) and Tropical Storm Imelda (ZCTA)

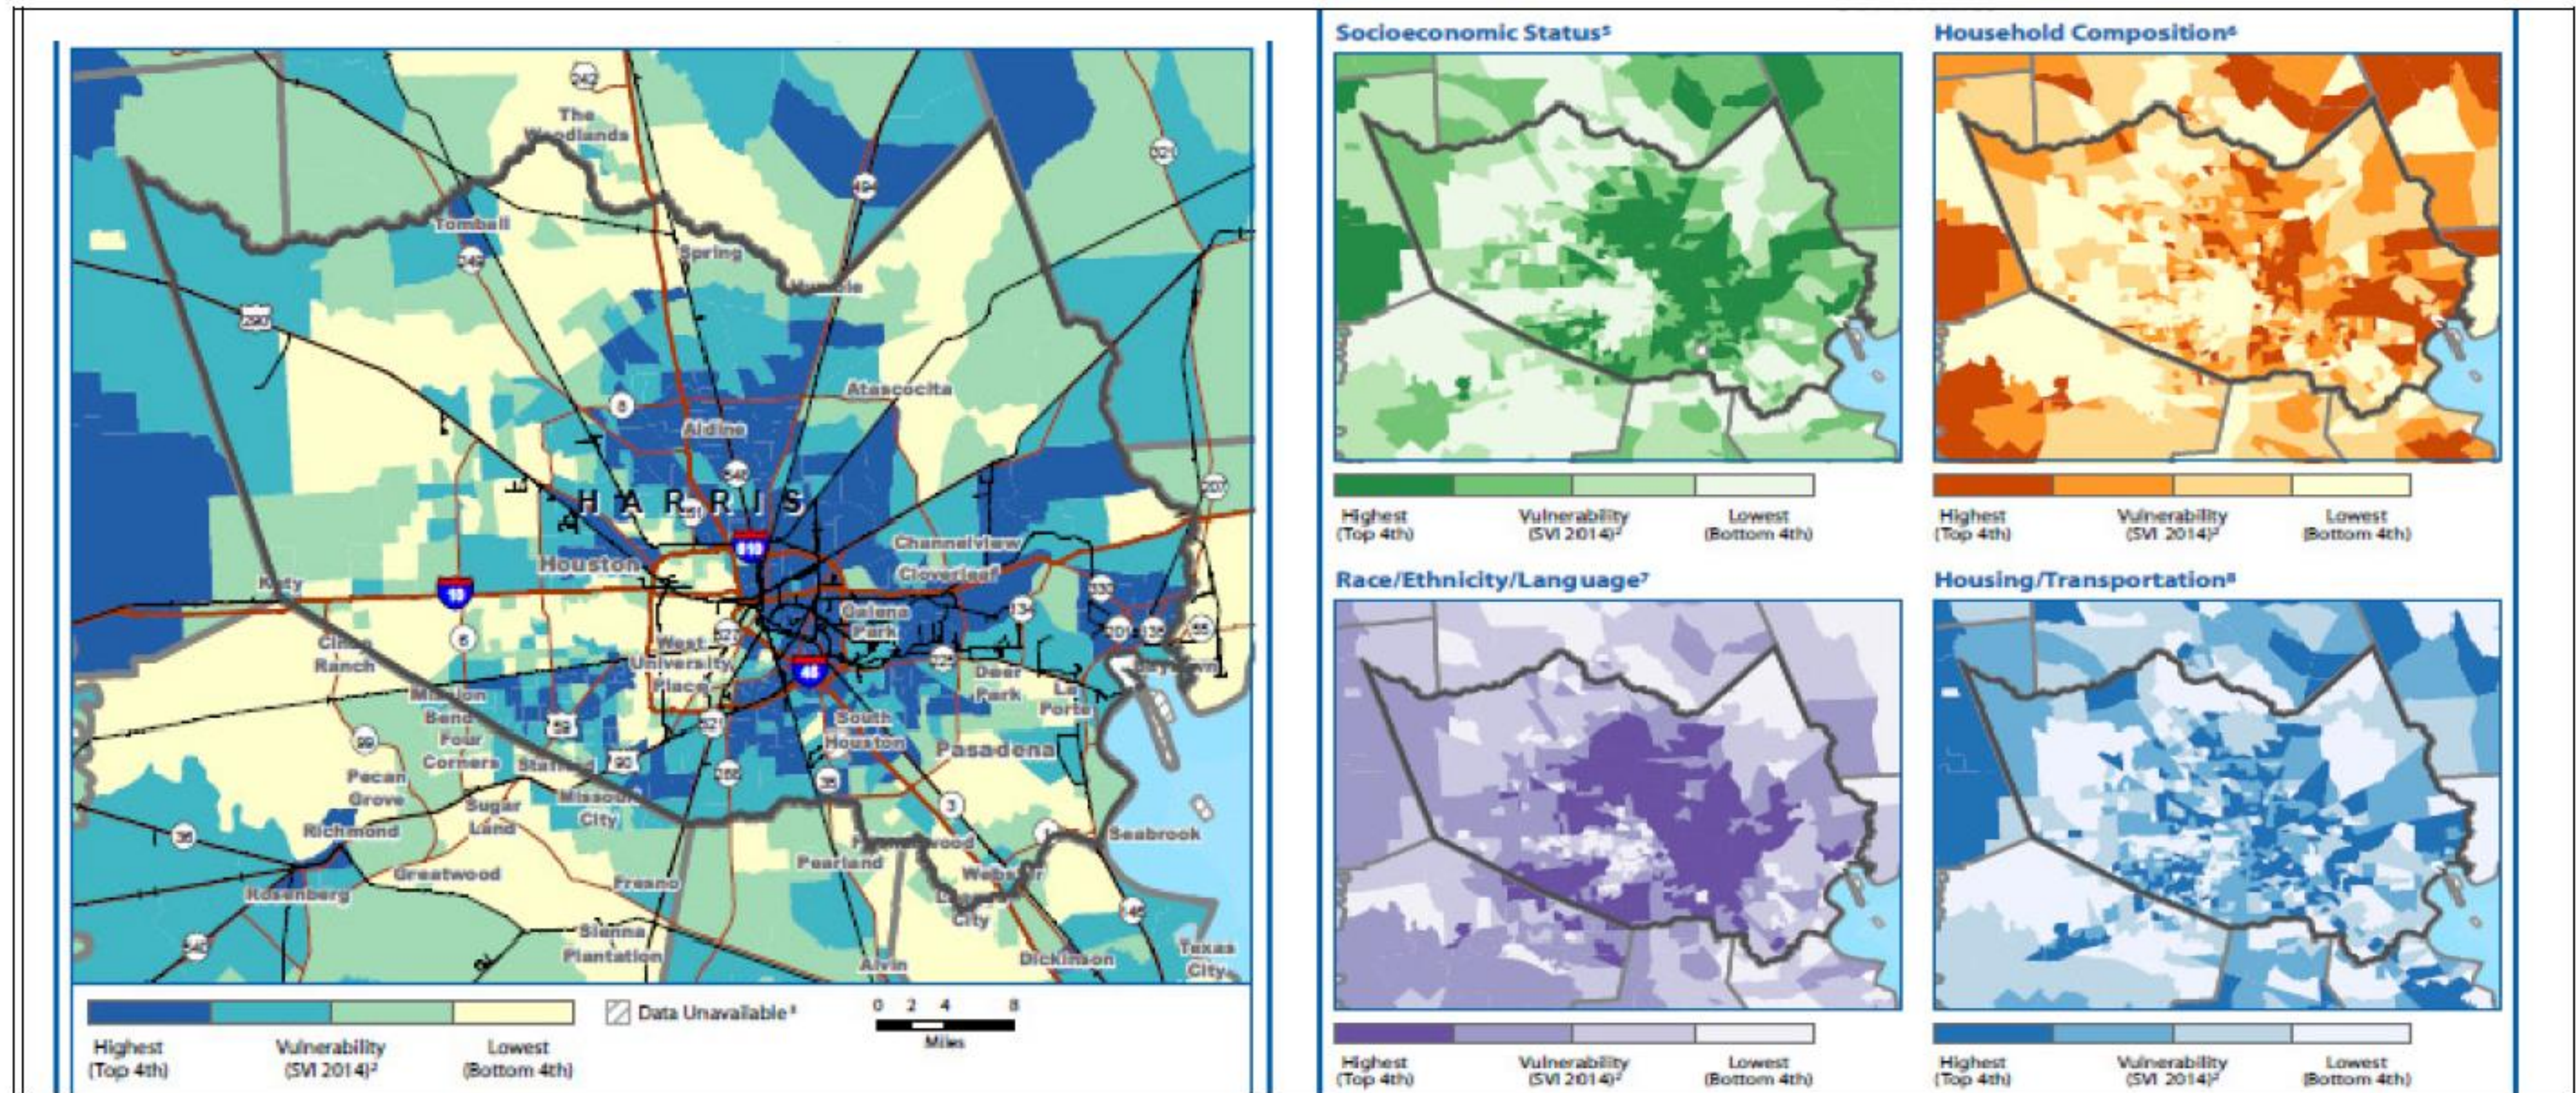

Hurricane Harvey (August 2017)

Tropical Storm Imelda (September 2019)

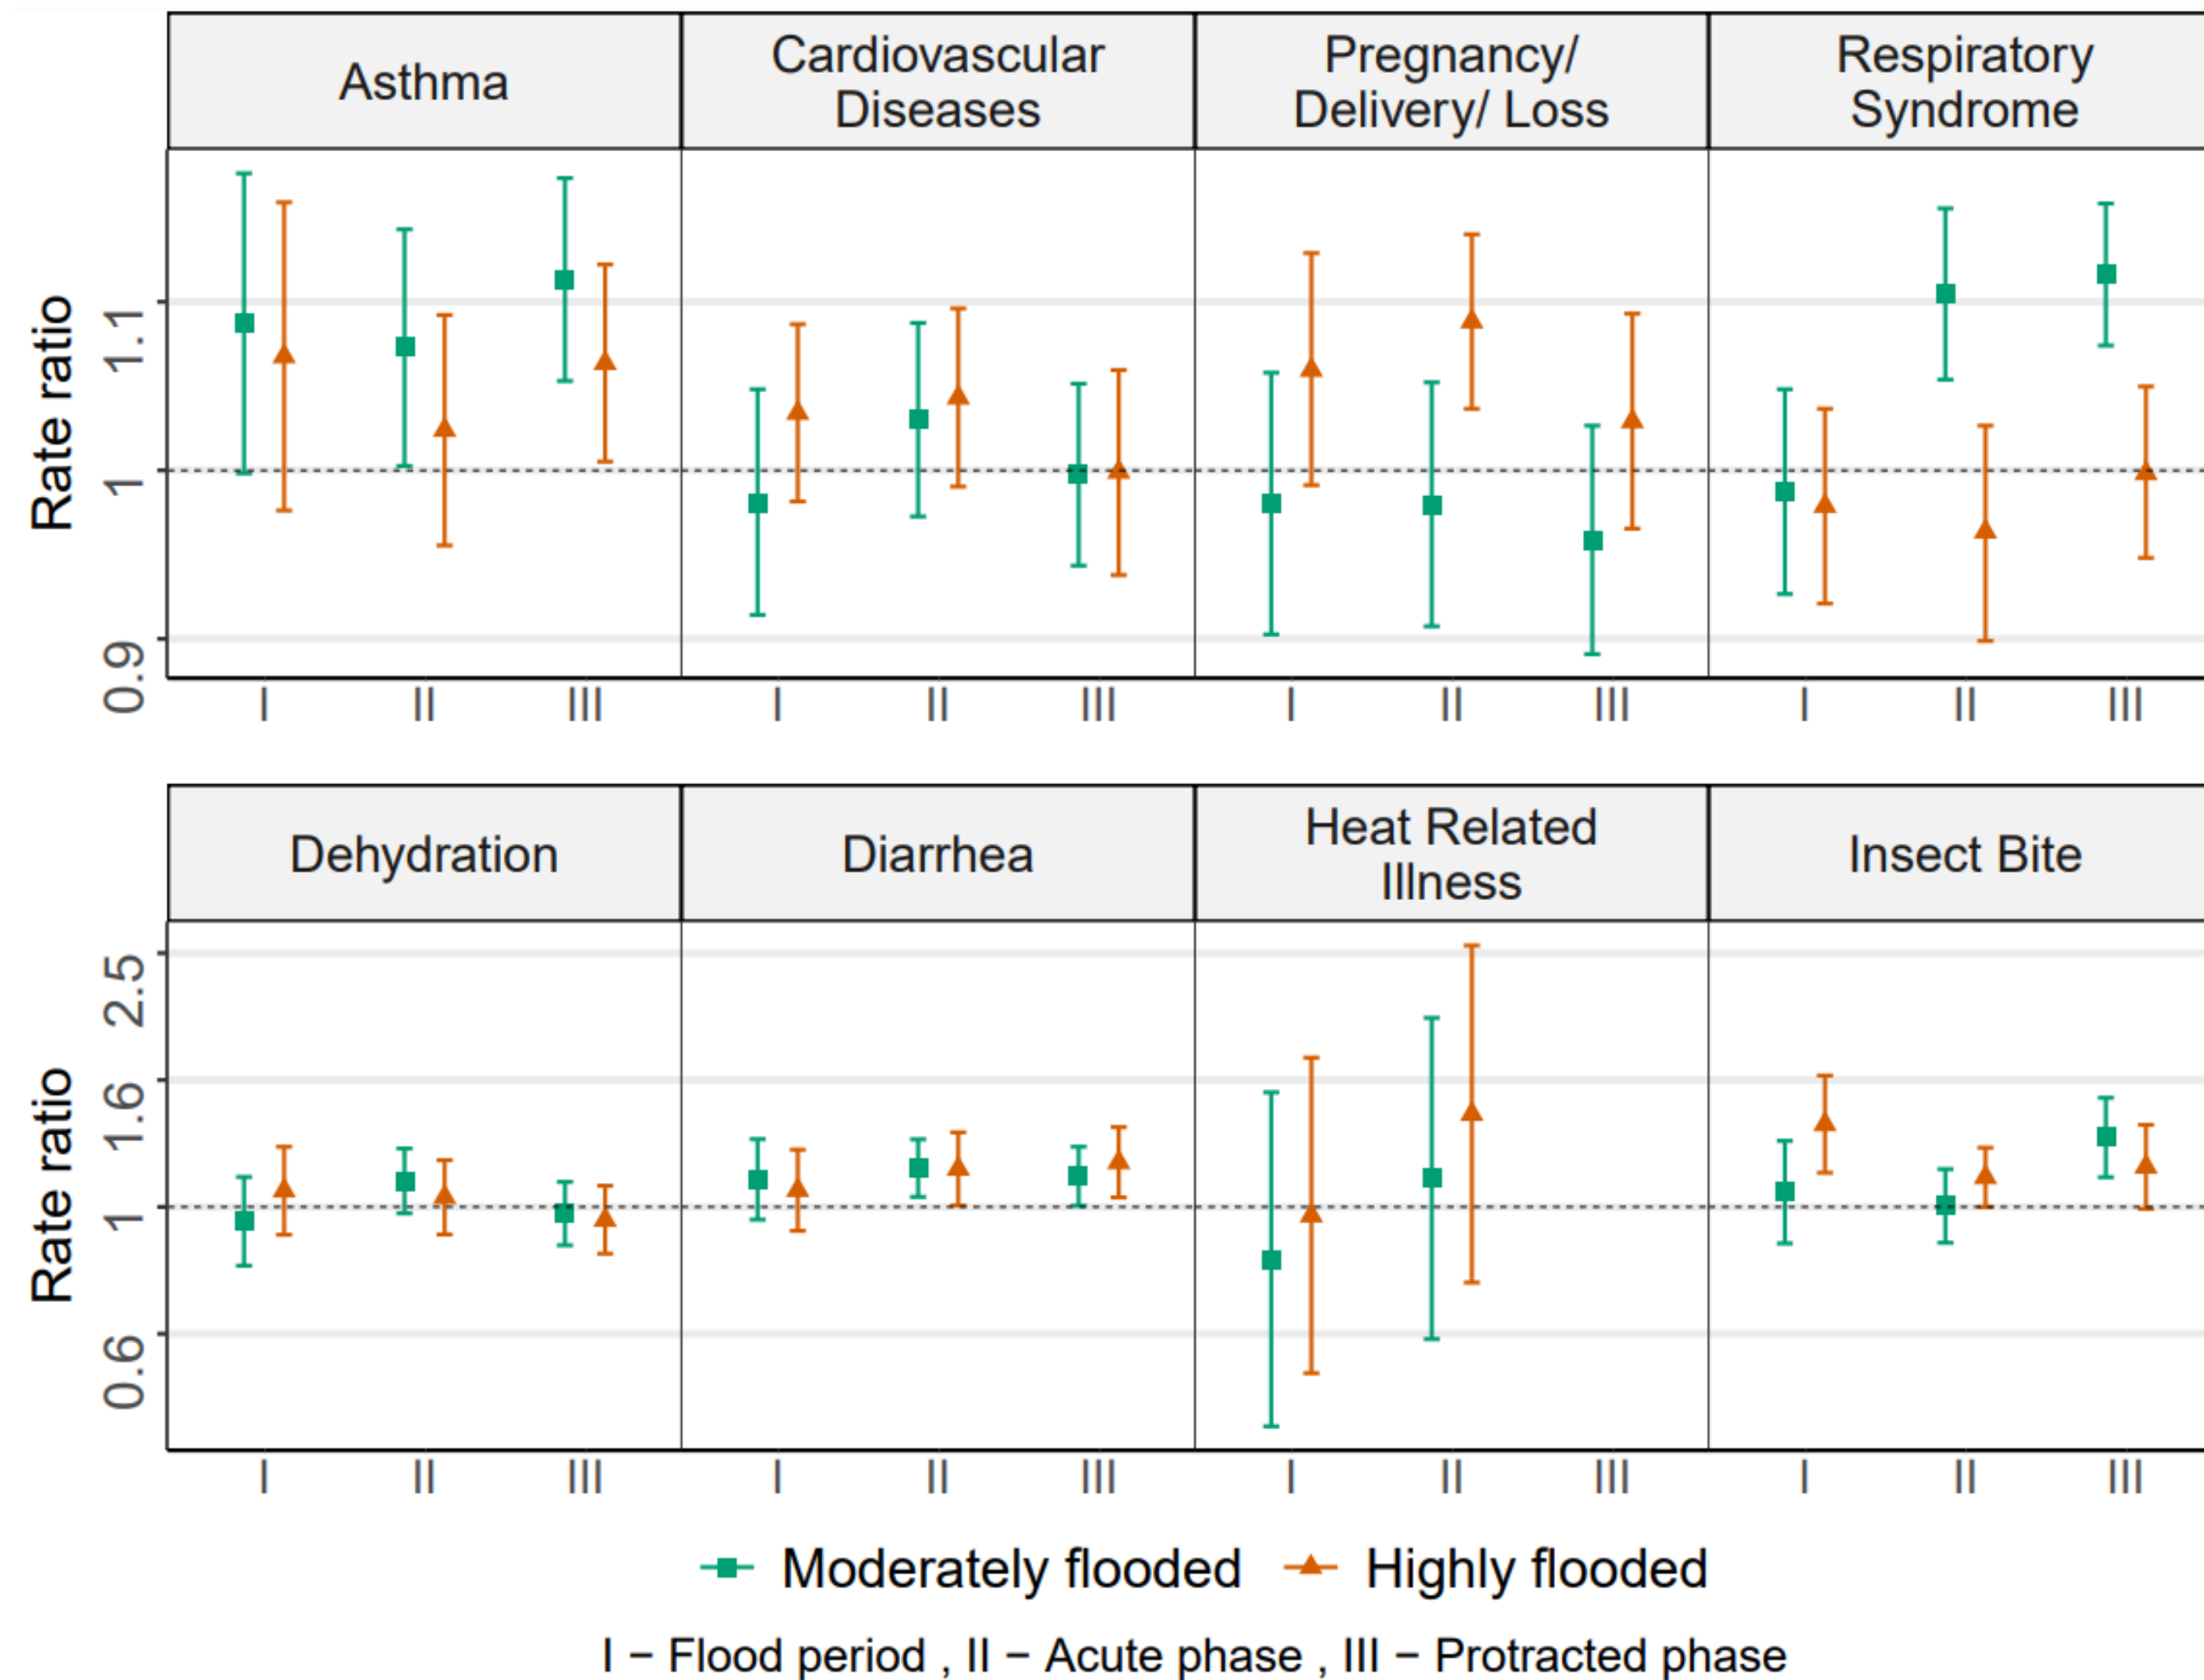

The CDC SVI is used to estimate the amount of needed supplies, locations of emergency shelters, assisted evacuations, and support response

ED visits for pregnancy complications, intestinal infections, insect bites were elevated following Hurricane Harvey

Tropical Storm Imelda: similar increases in cause-specific ED visits, particularly in highly flooded ZCTAs

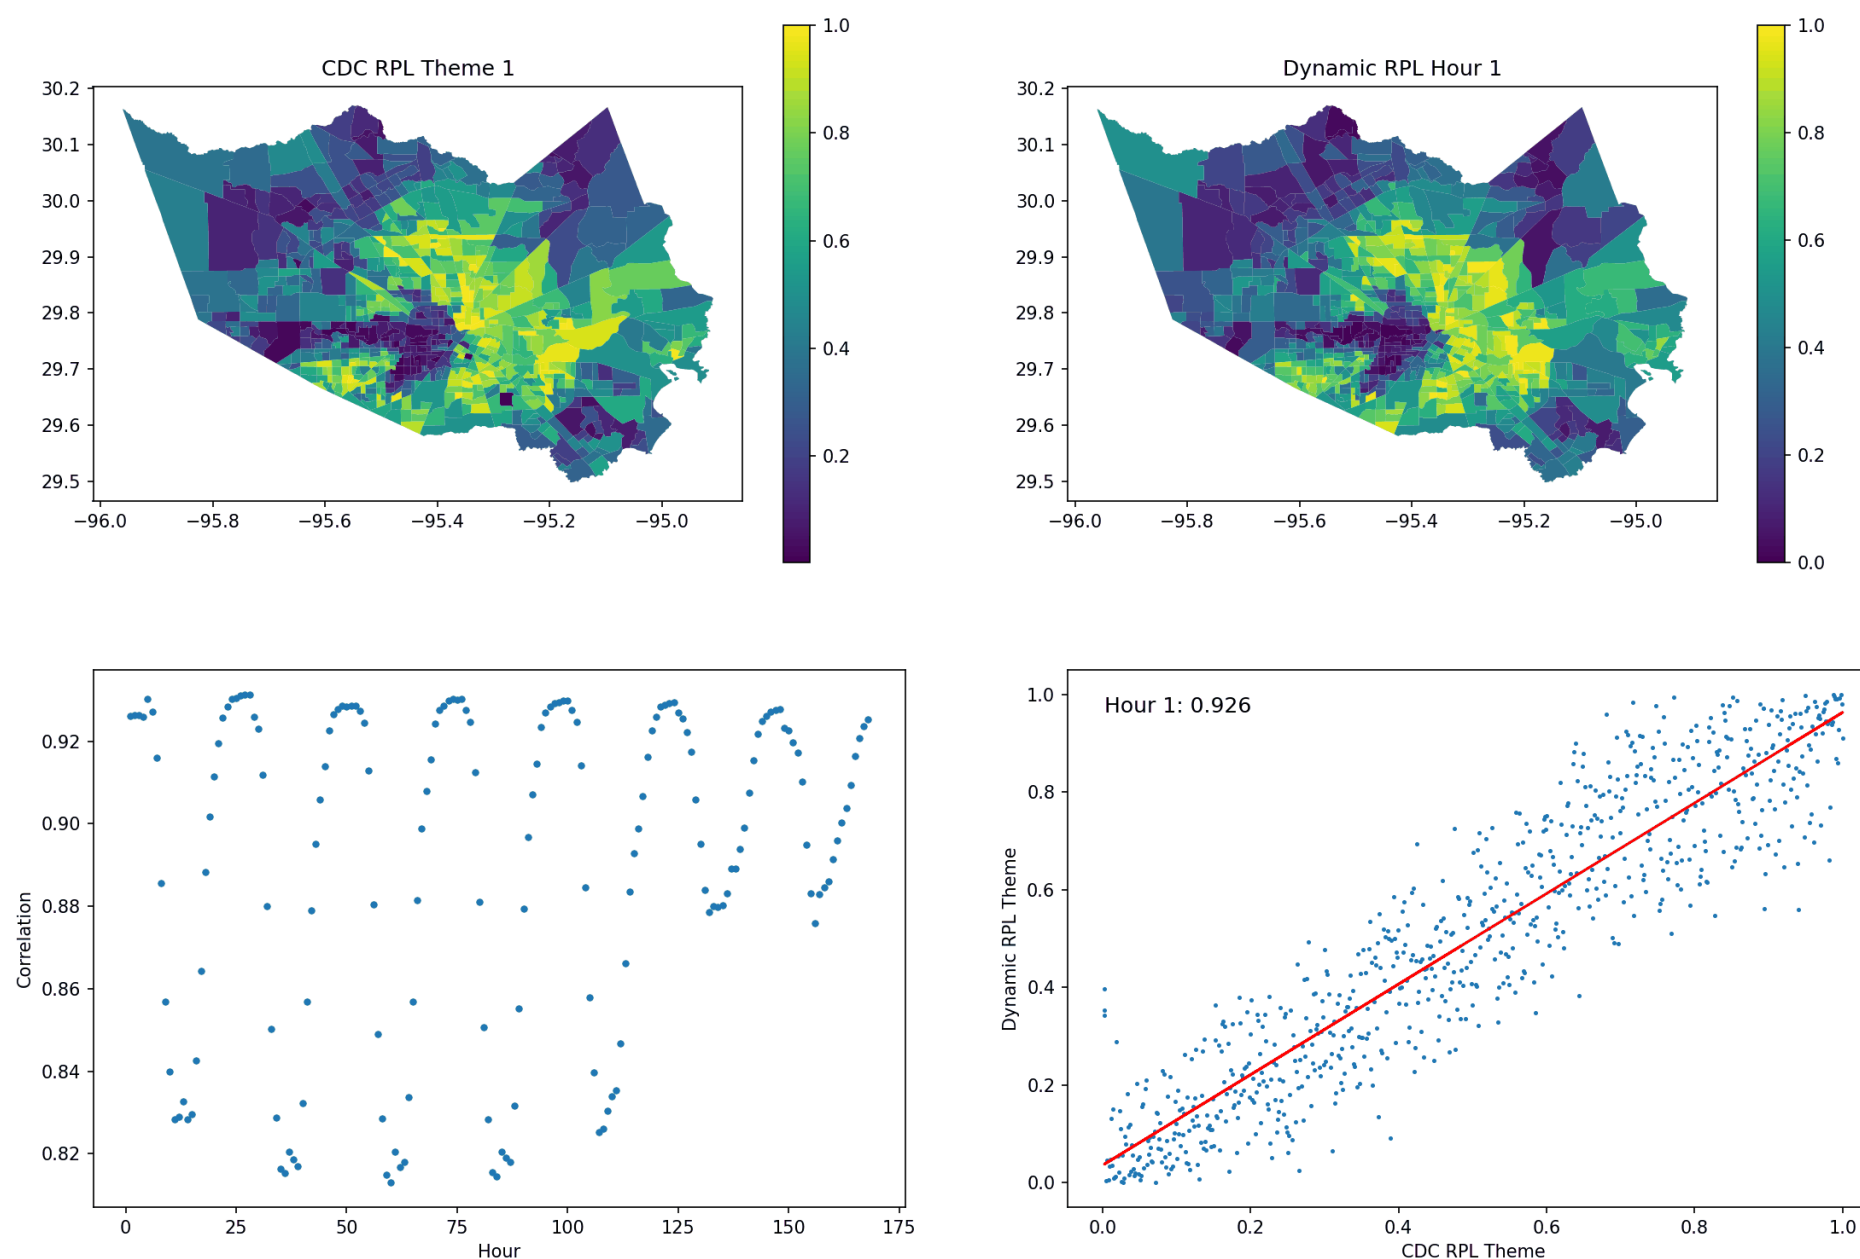

Census tract CDC SVI modifies the effect between flooding and ED visits

Conclusions and Next Steps

Synthetic population of Harris County, TX compared to CDC SVI

EO data can be used to improve characterization of flood-related health outcomes when combined with healthcare visit data

Next steps

- Exposures beyond the home census tract or ZCTA can be modeled via a synthetic population to further refine exposures.
- Inundation data could be incorporated into real-time syndromic surveillance systems to improve situational awareness at health departments.

Air Quality Monitoring & Forecasting in Thailand

Pawan Gupta (USRA/MSFC)

pawan.gupta@nasa.gov

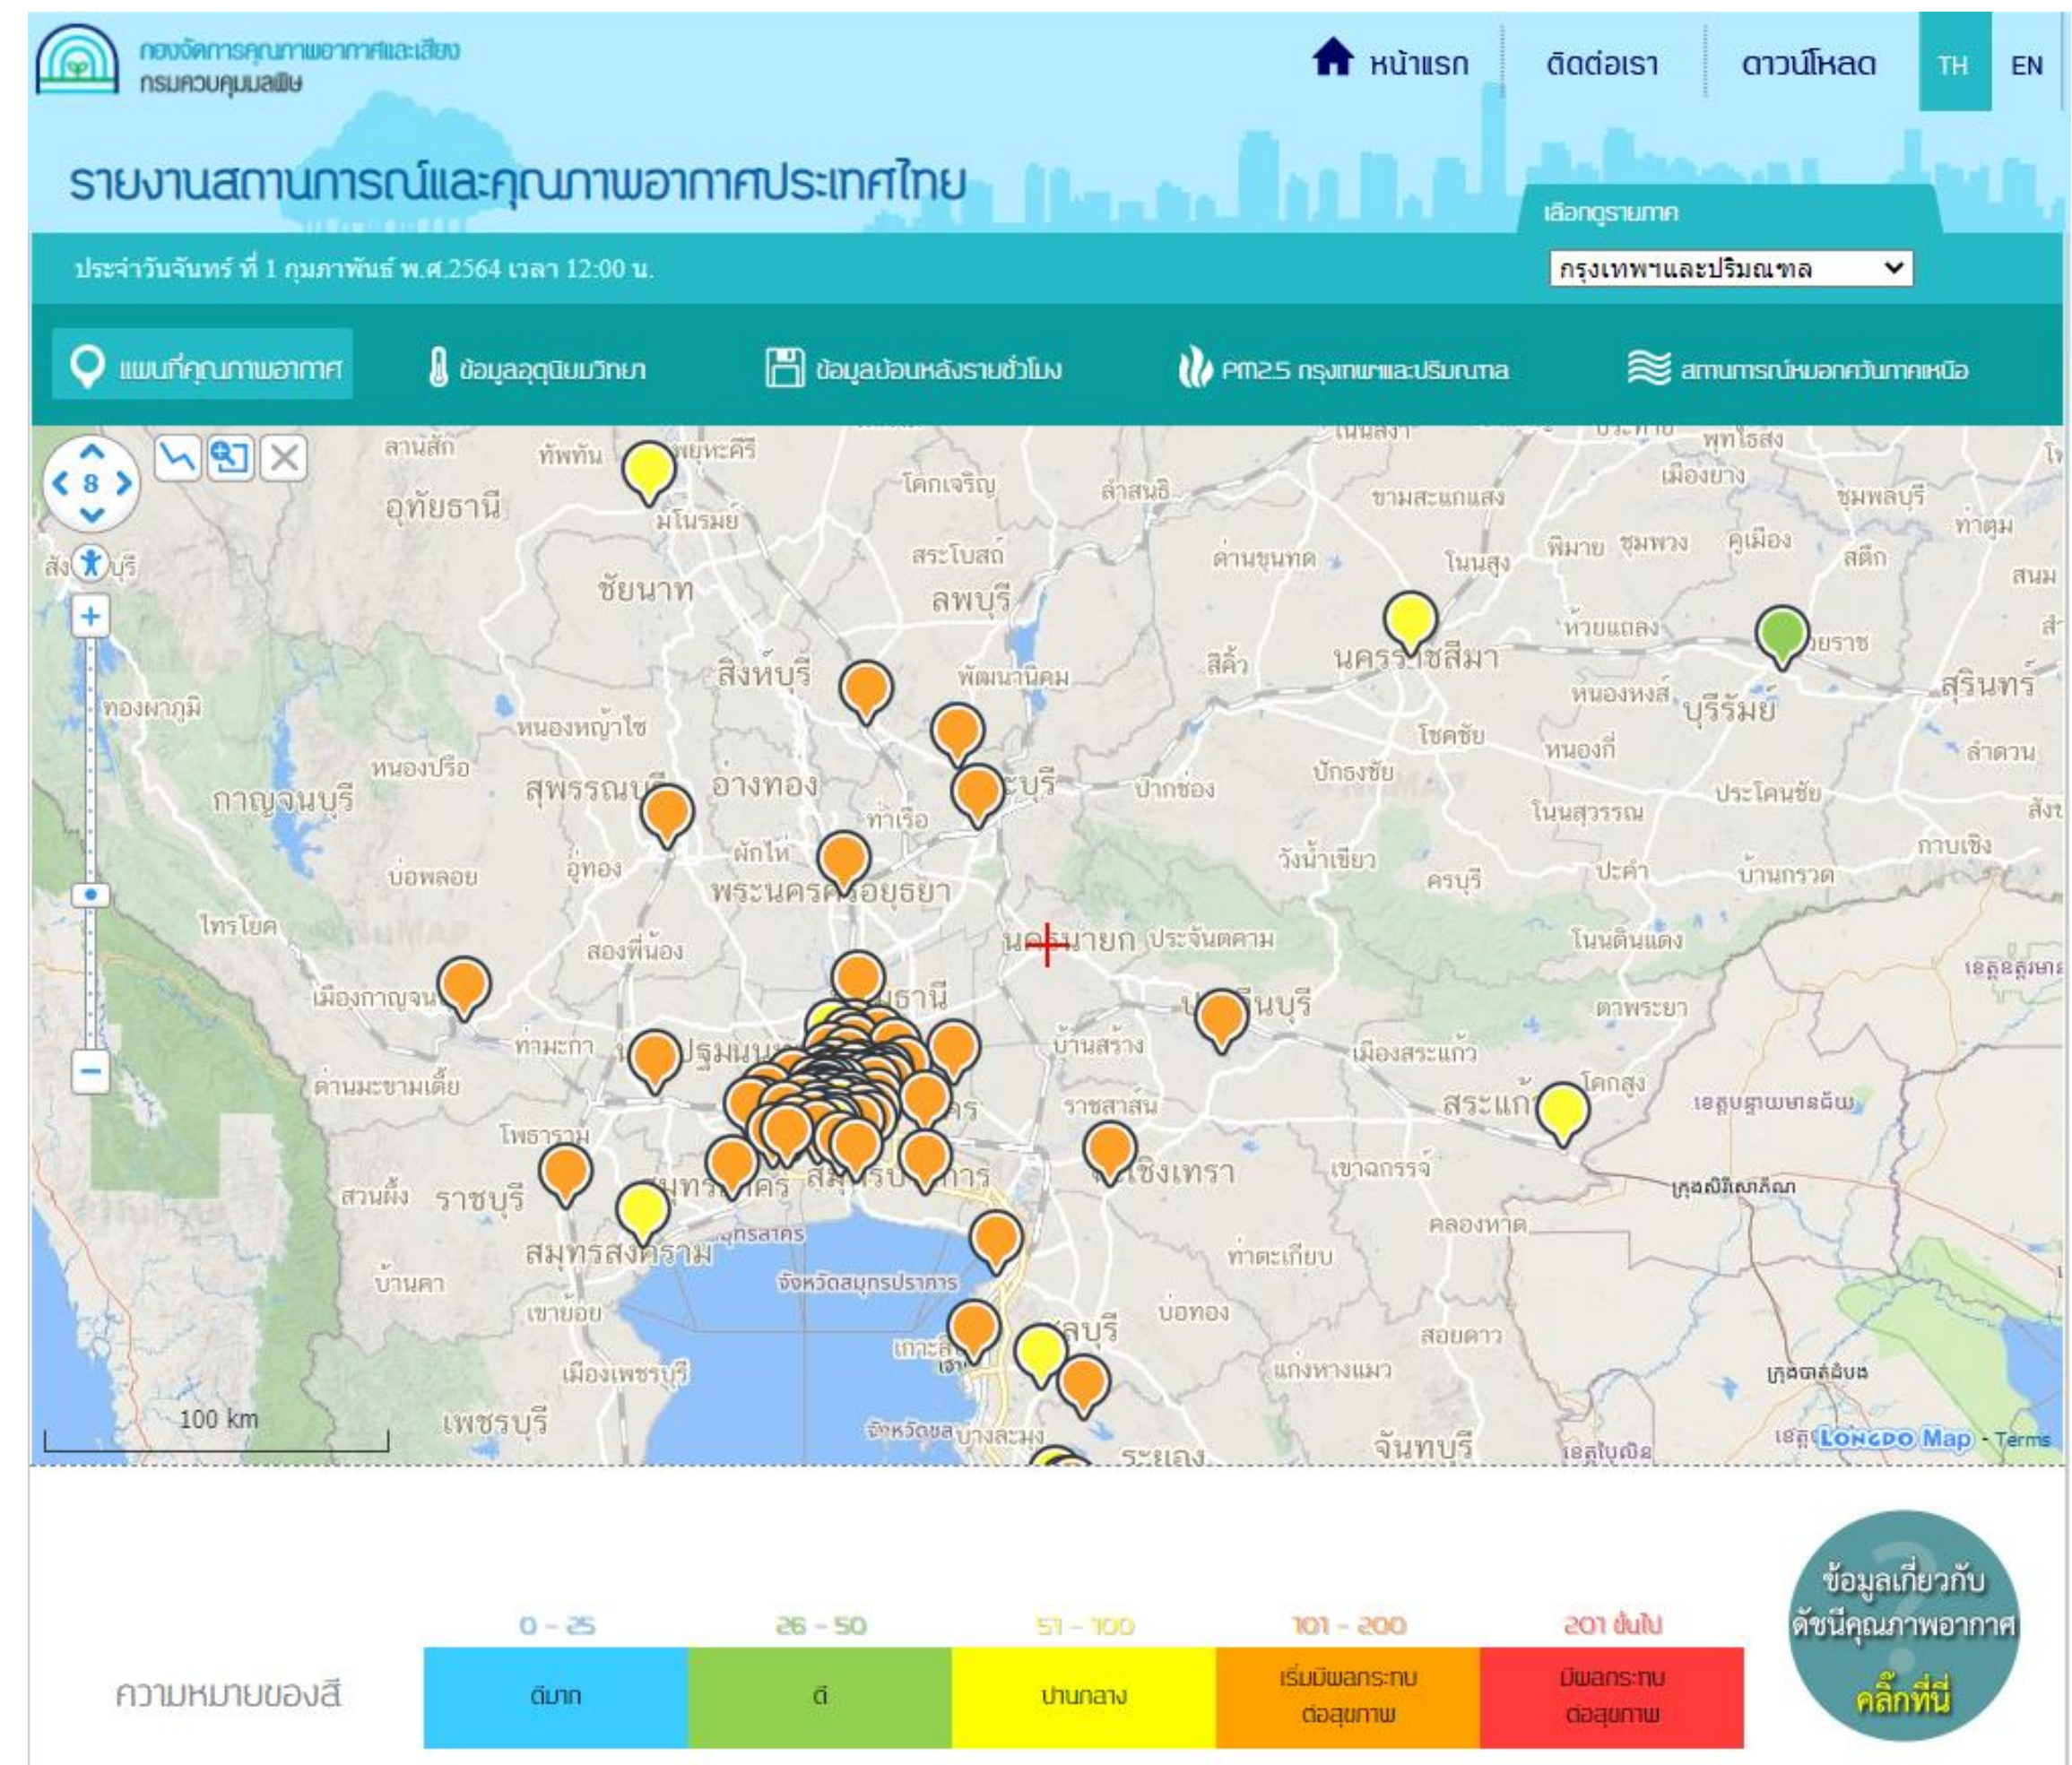

EARTH SCIENCE APPLICATIONS WEEK 2021

SERVIR focuses on countries in Asia, Africa, & the Americas

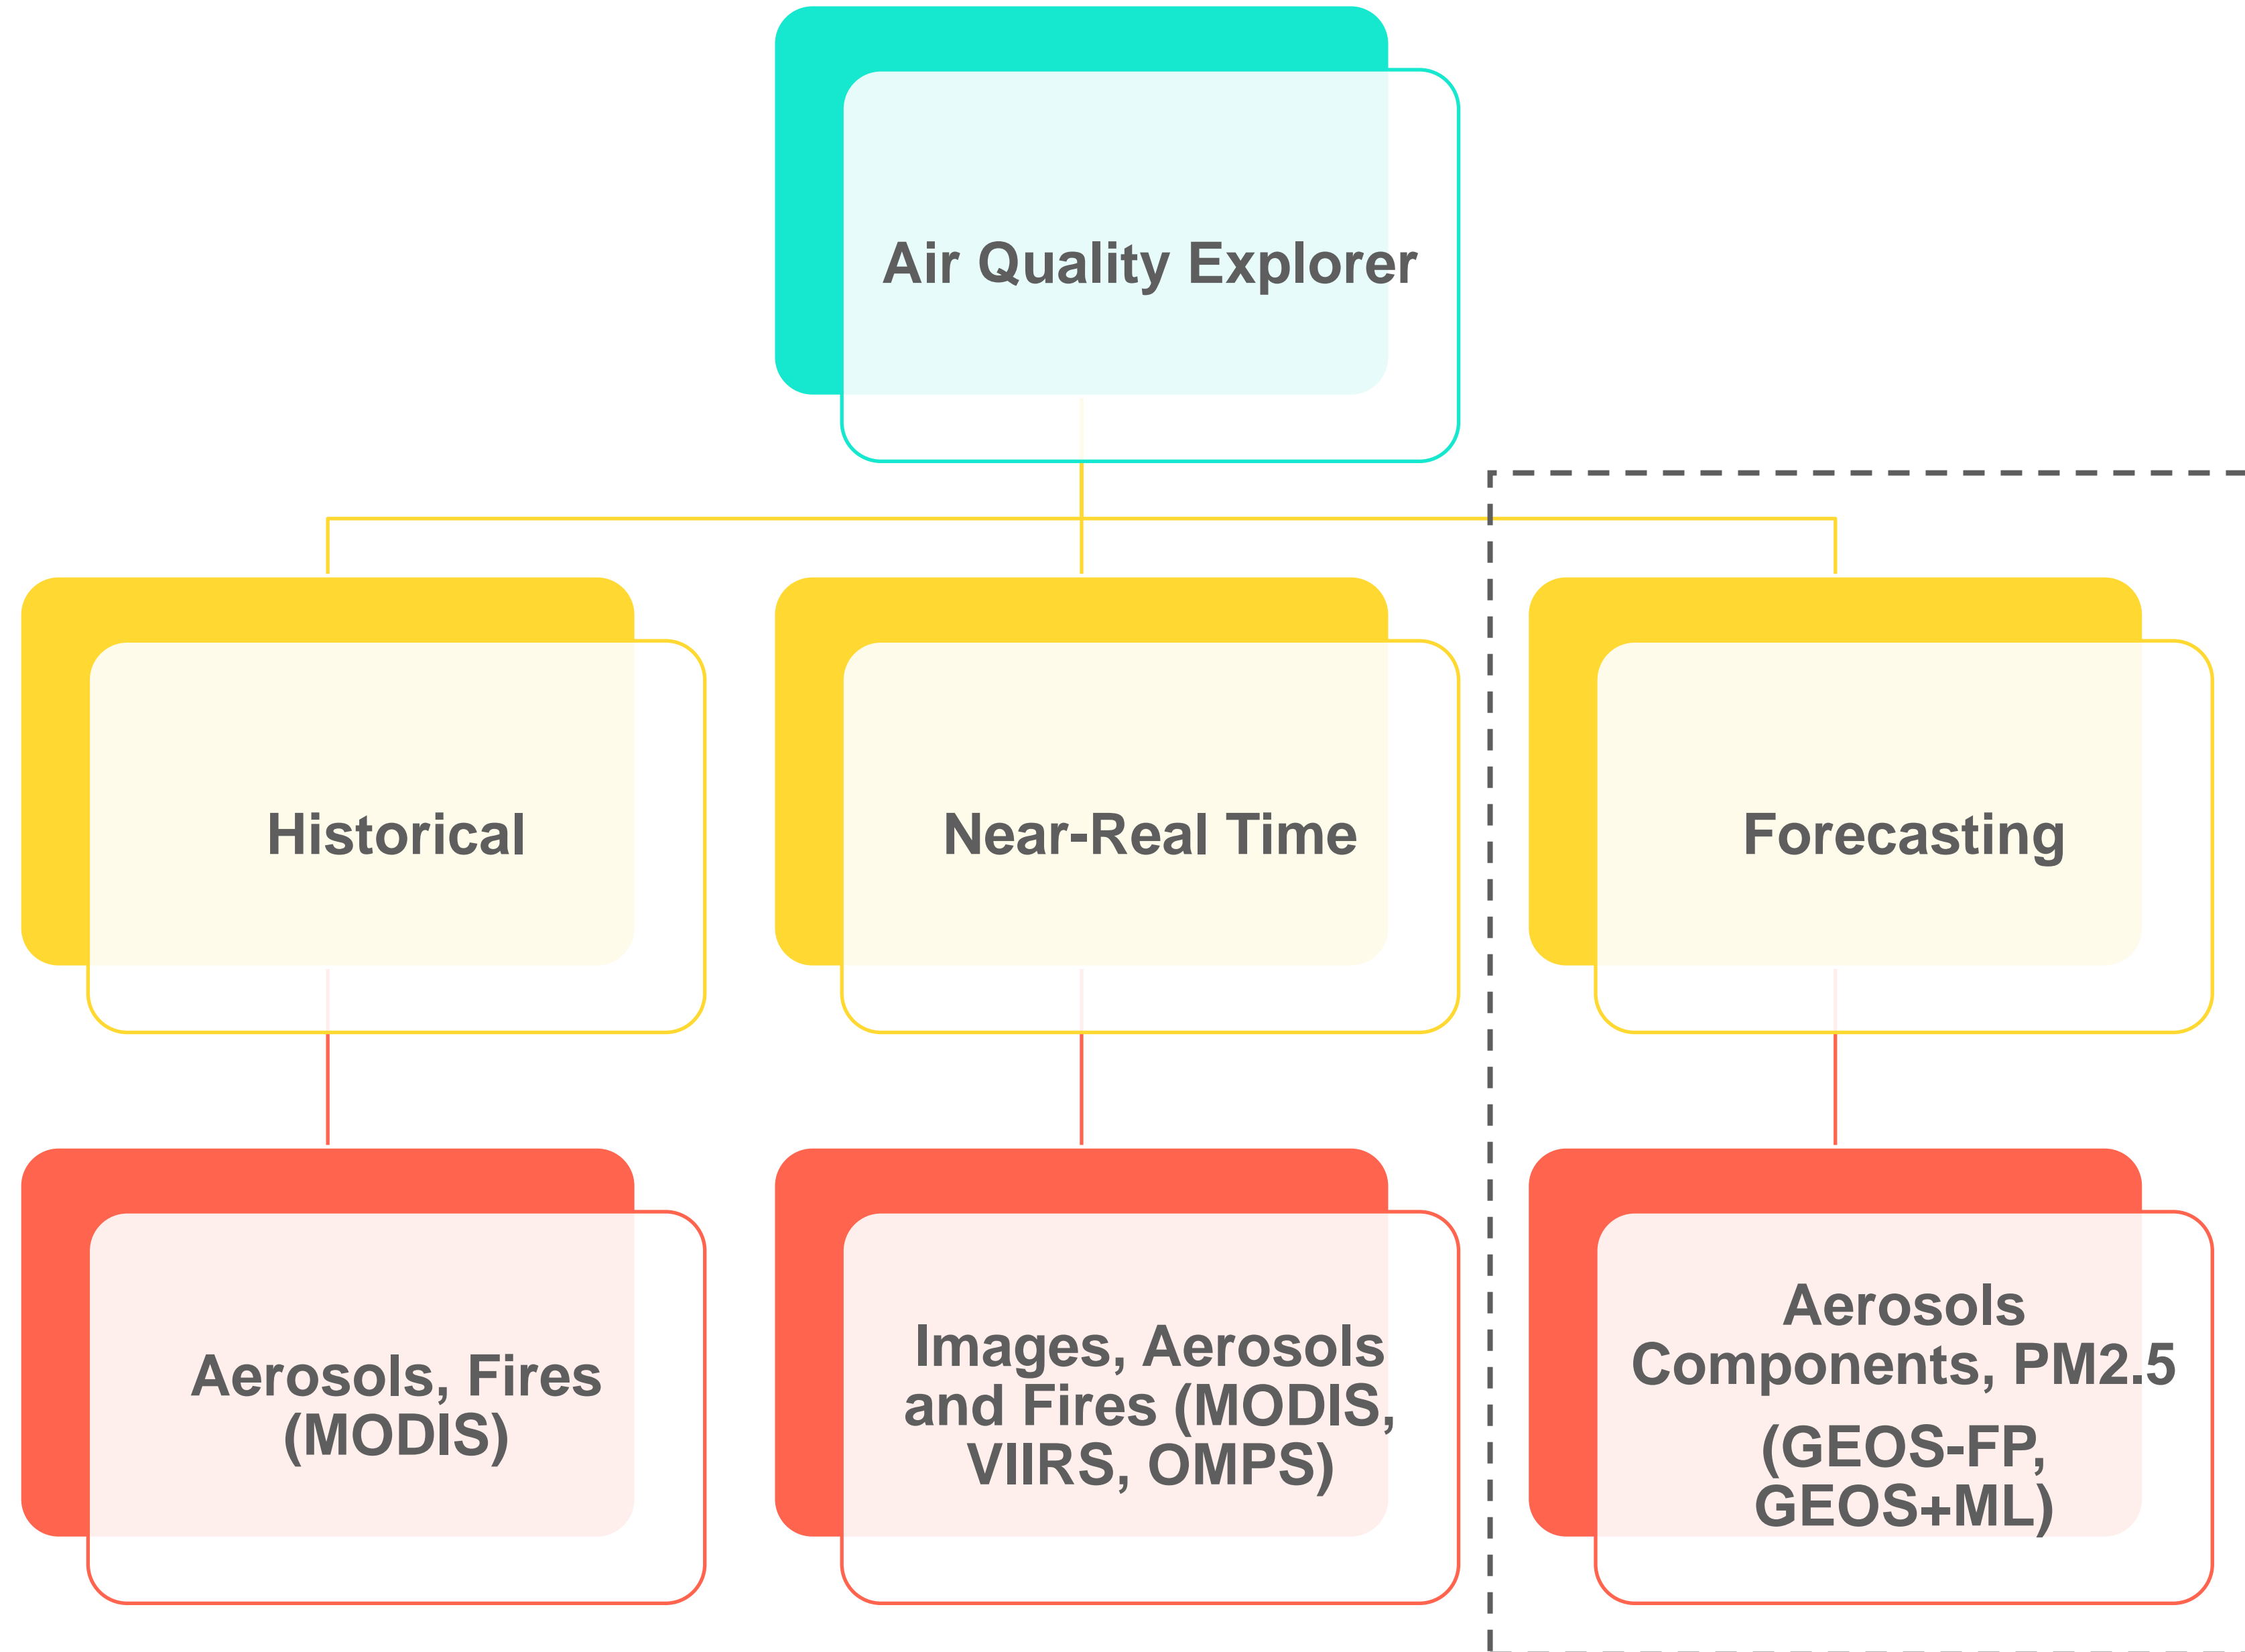

Air Quality Monitoring in Thailand

- The Royal Thai Pollution Control Department monitor air quality in Thailand from over 60+ stations.
- The major sources include fossil fuel burning, roadside dust, seasonal biomass burning and transboundary pollution
- PCD have limited or no forecasting capabilities for the region.
- NASA SERVIR in partnership with PCD and GISTDA started air quality research and co-development in 2019.

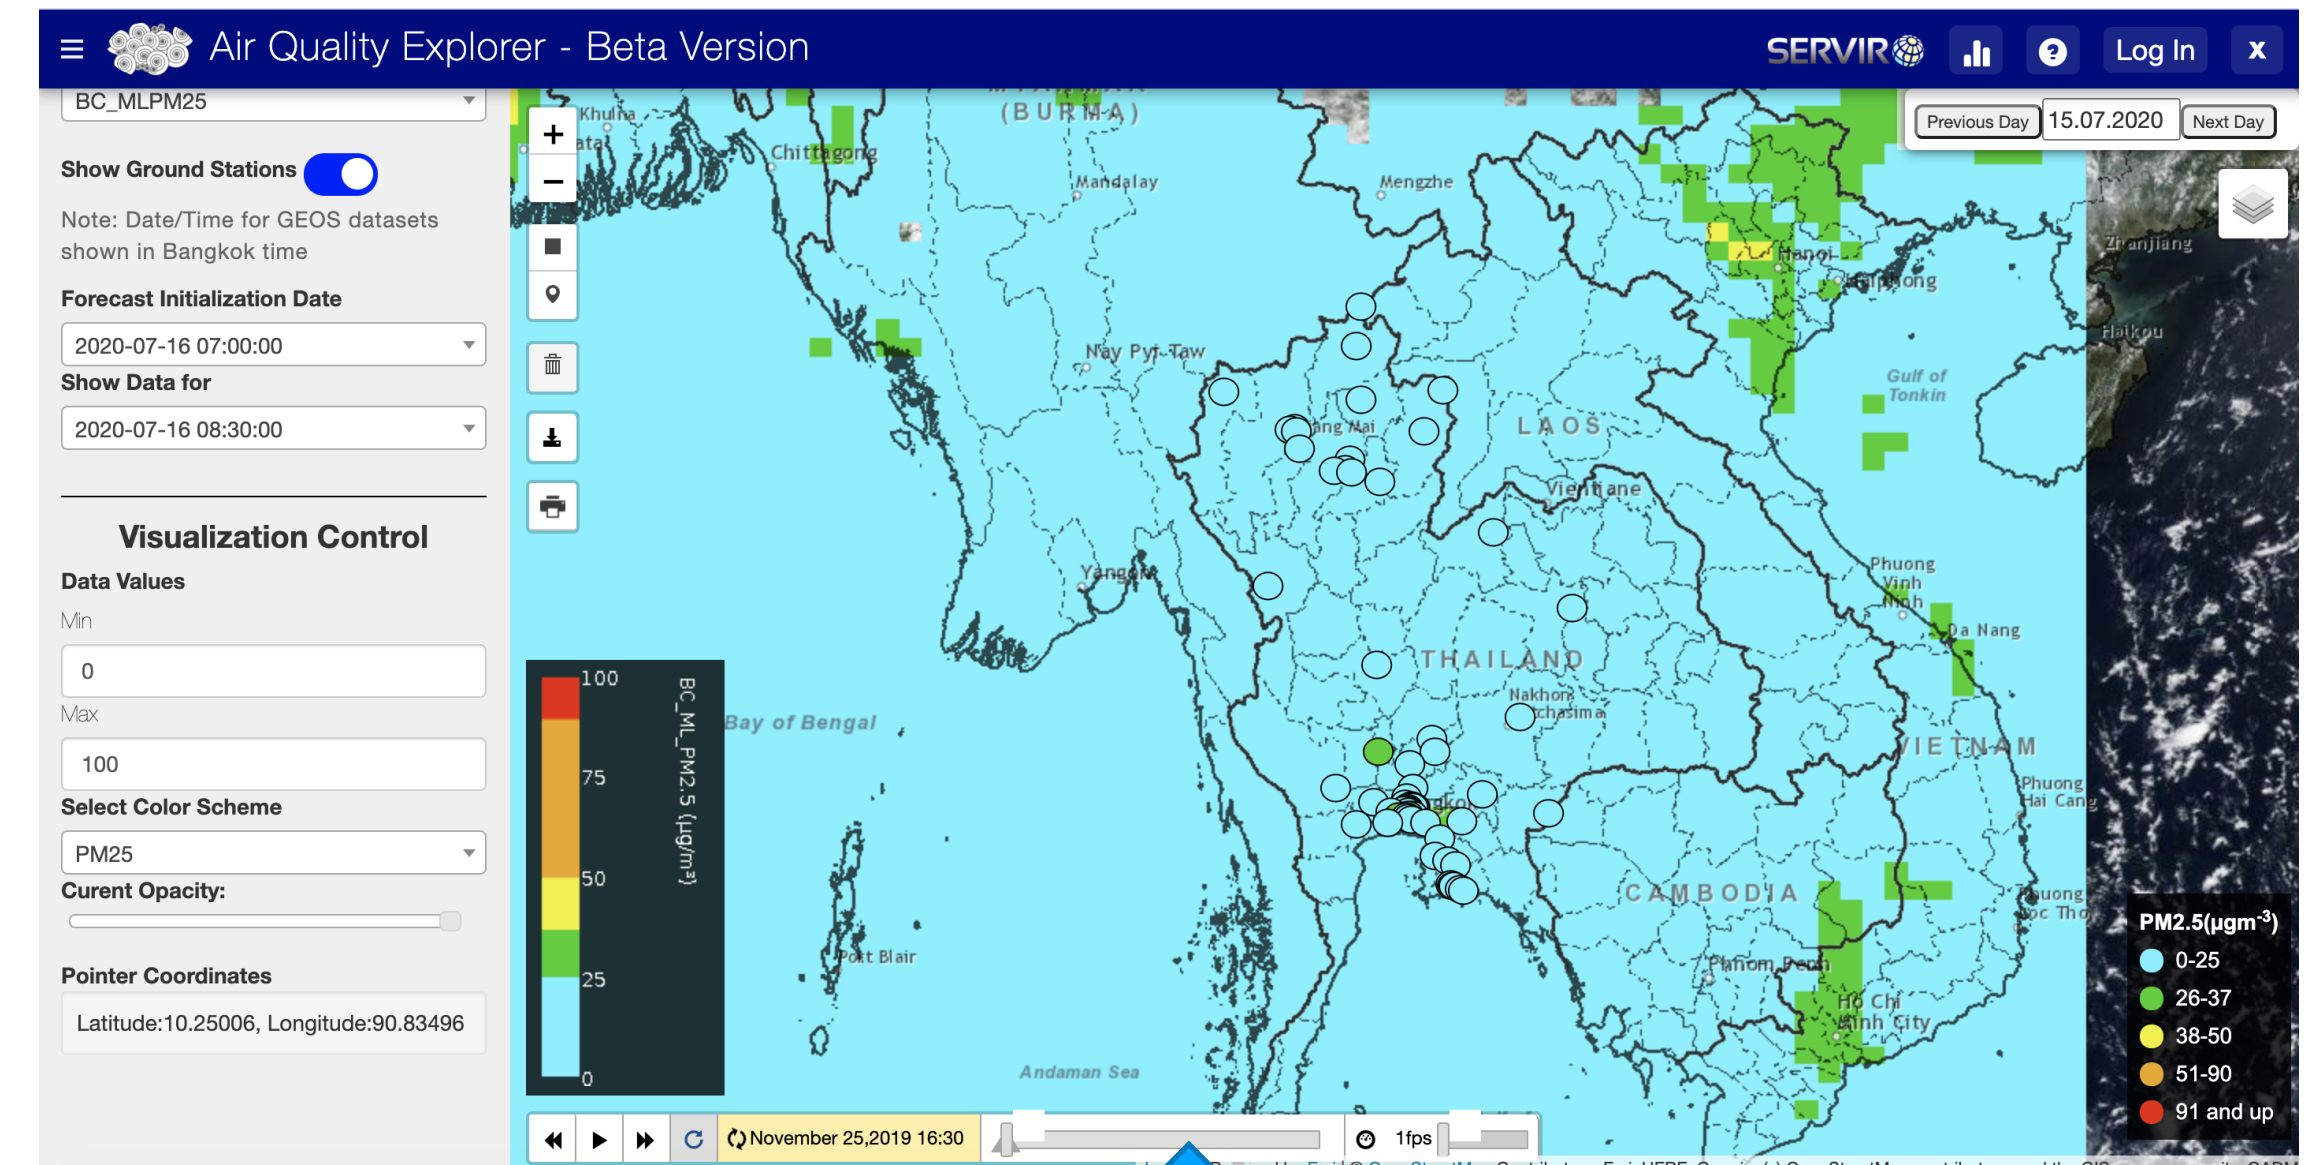

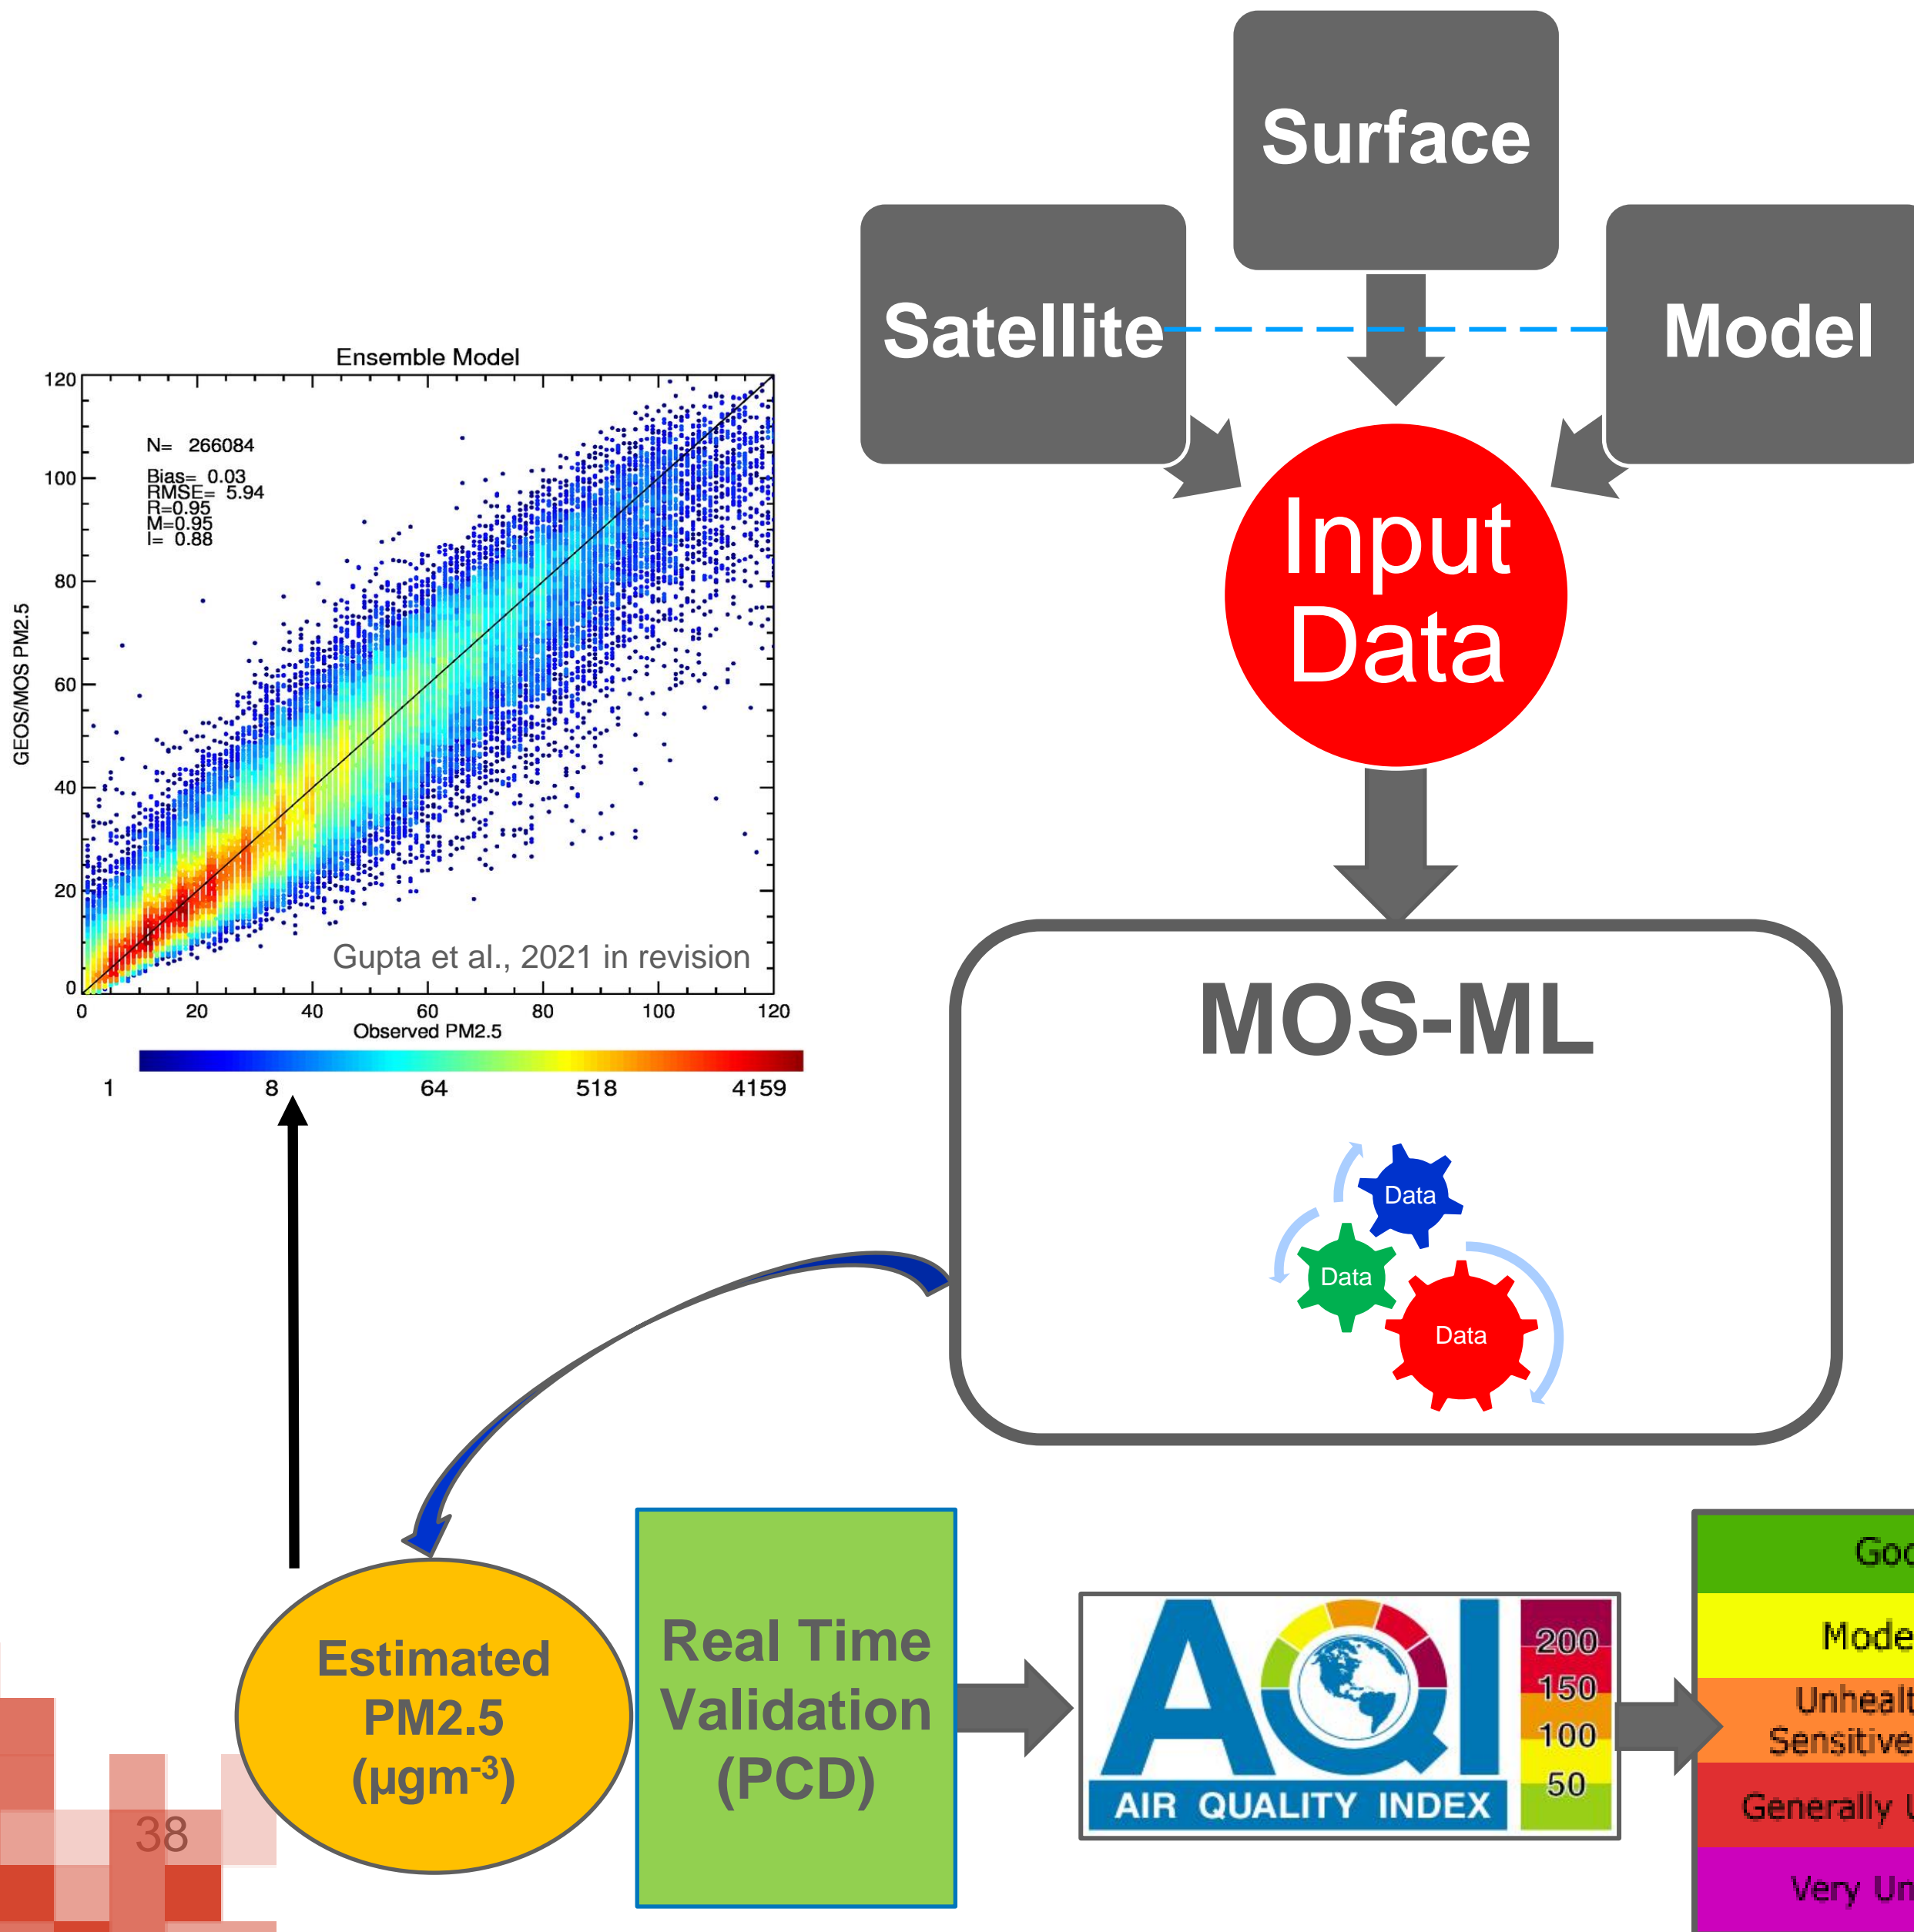

Air Quality Explorer (Service) For Thailand

Forecasting Framework

<https://aqatmekong-servir.adpc.net/en/>

API & Phone Apps

Online Visualization Tools and Web based Data Archives

Air Quality Event Example (Feb 18, 2021)

Suomi-NPP VIIRS, RGB

Suomi-NPP VIIRS, Fires

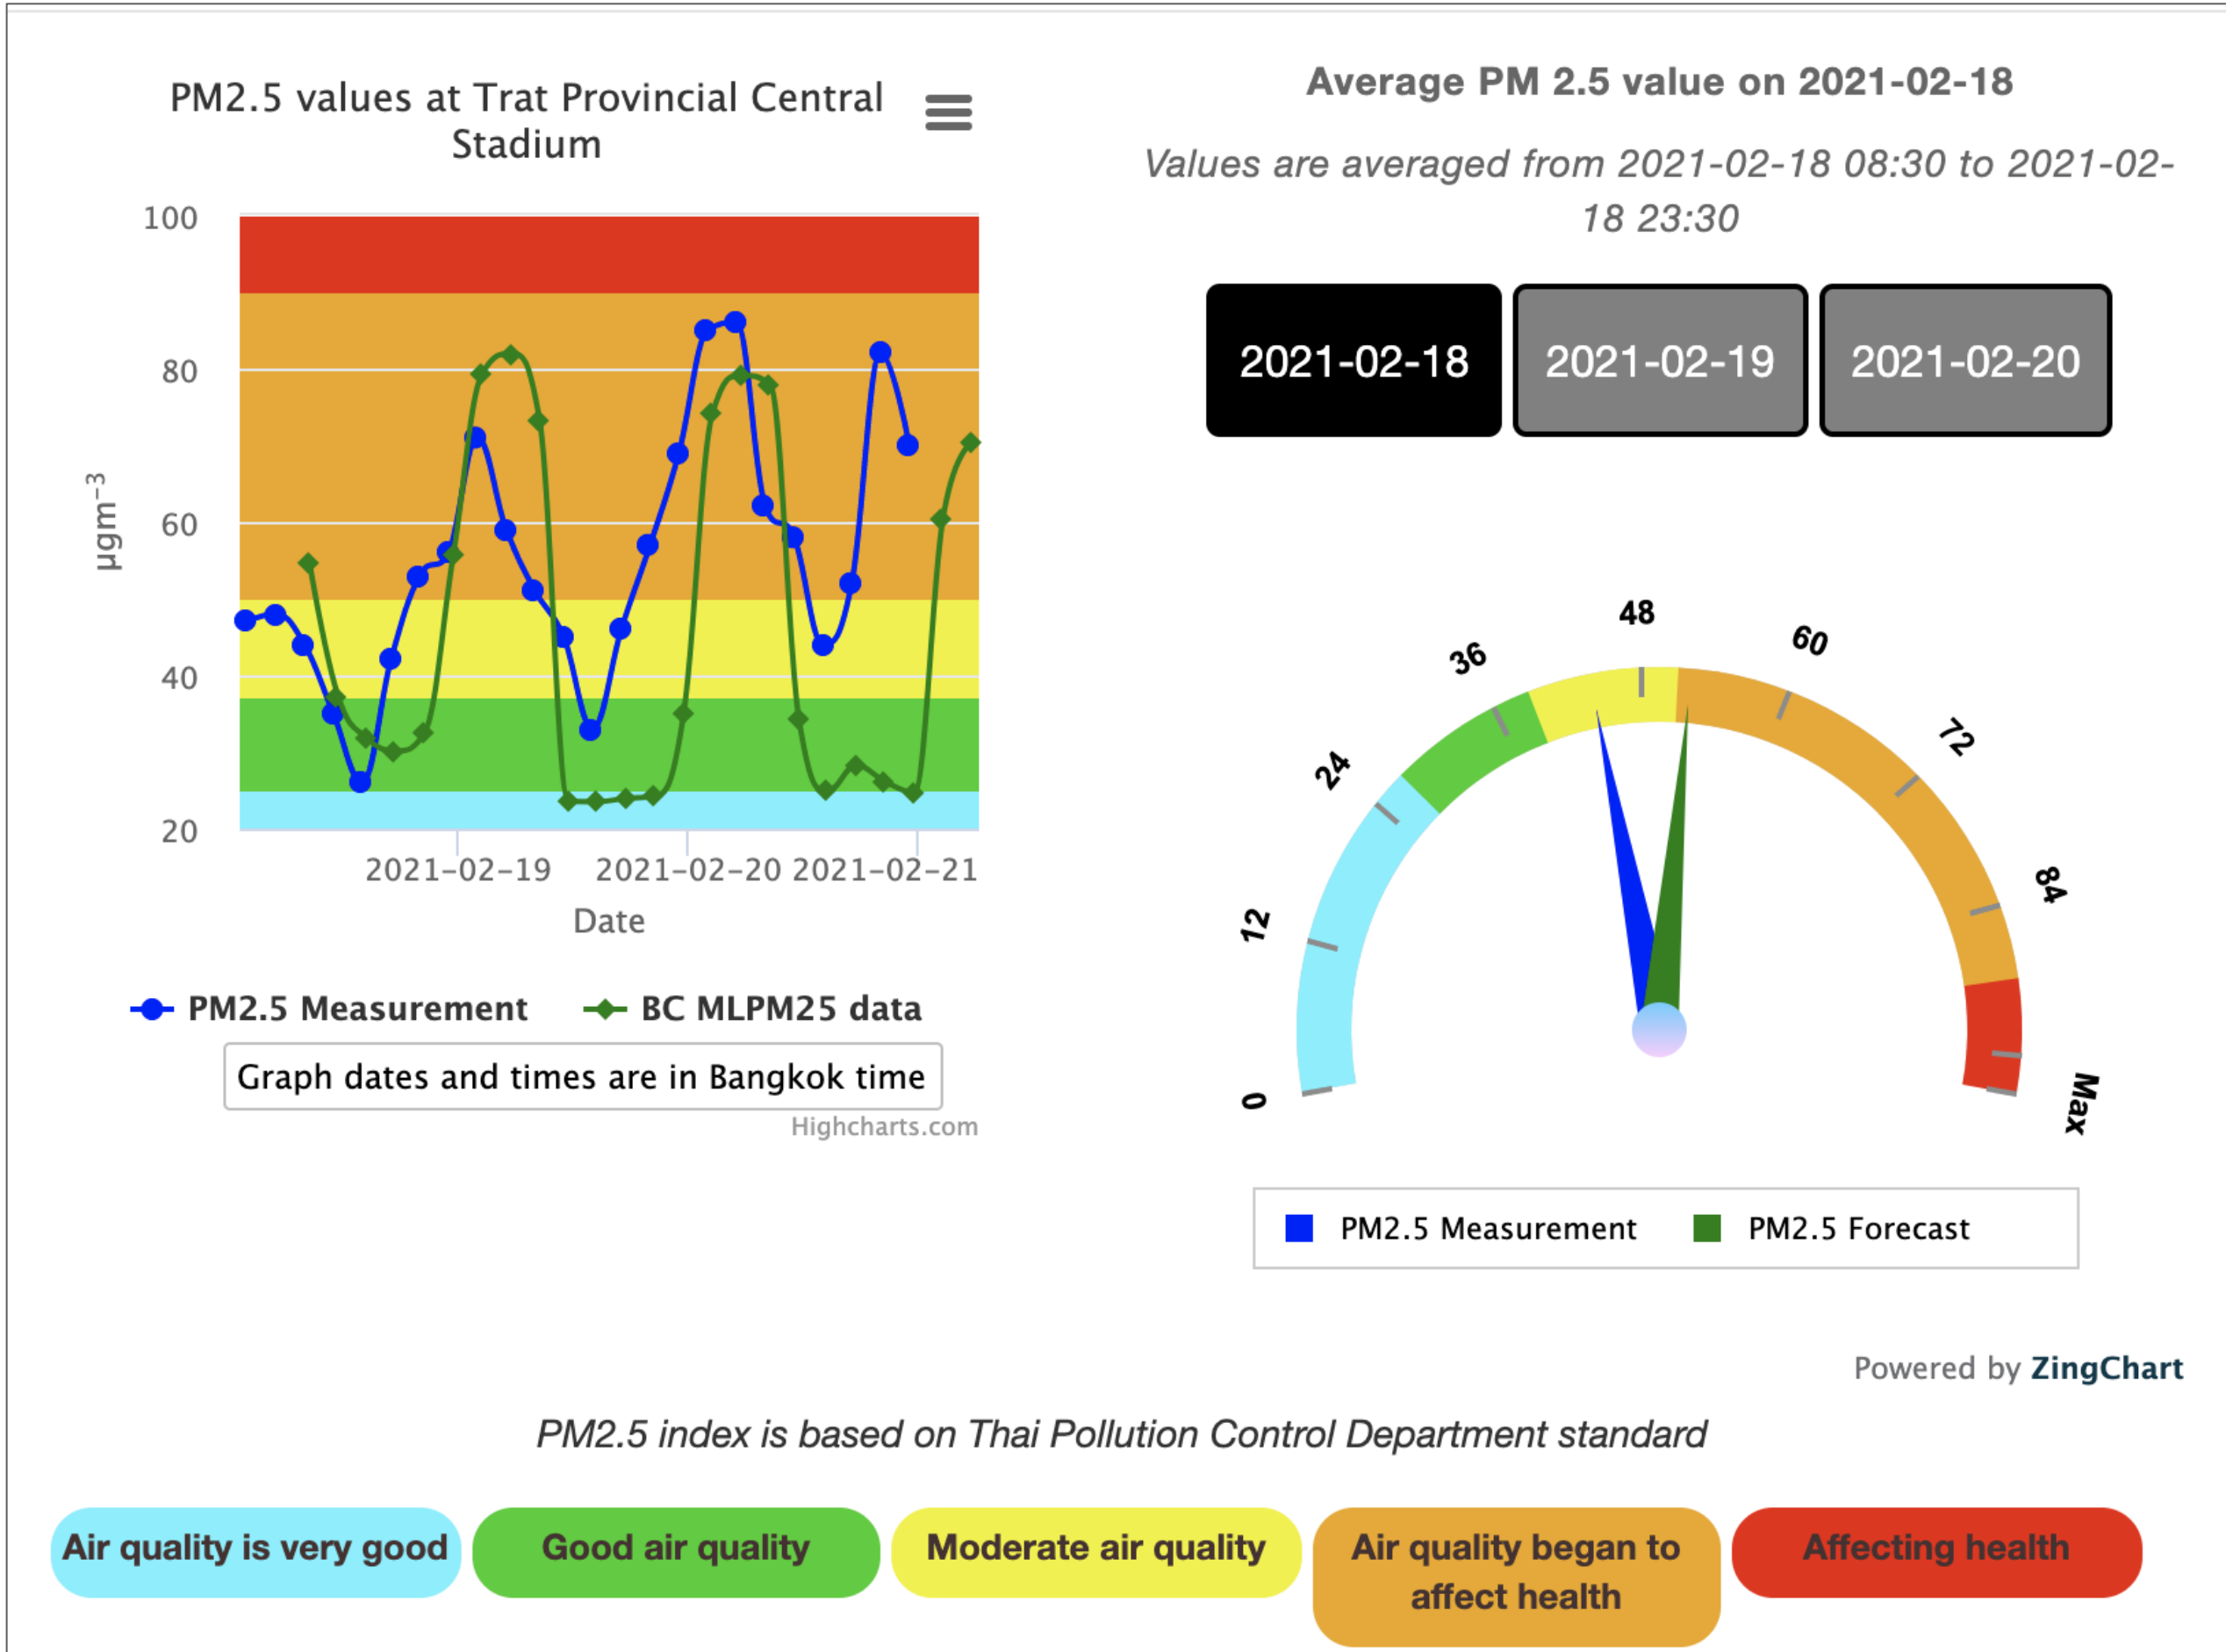

Suomi-NPP VIIRS, Smoke Mask

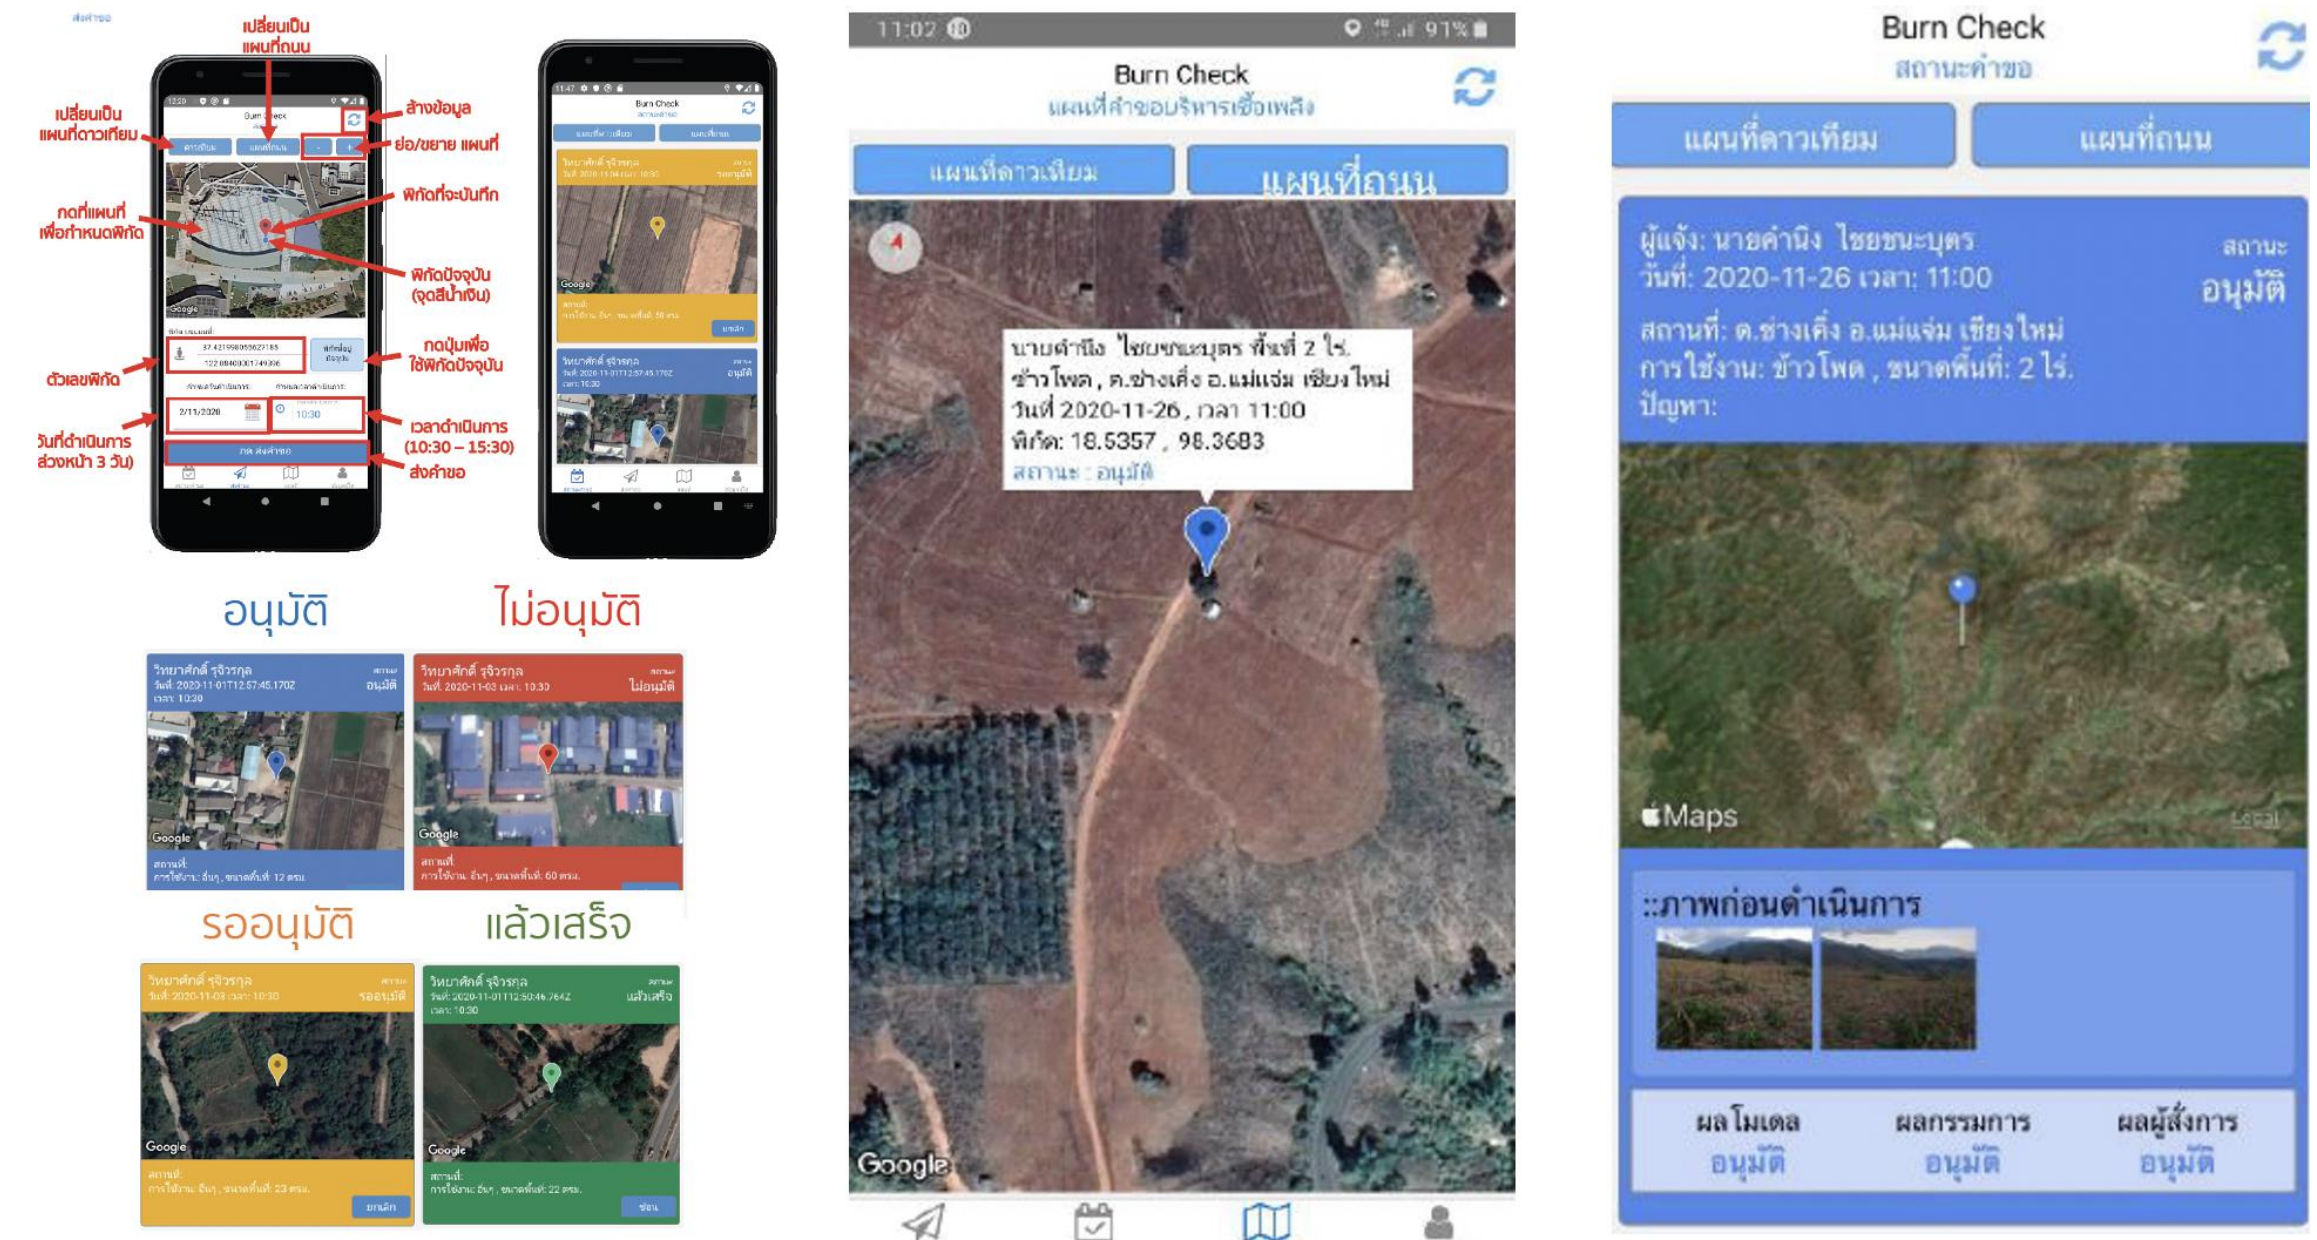

GEOS-FP + MLA - PM2.5

Real Time Validation and Other Applications

Forecast is initiated on Feb 18th

Burn Check Phone App

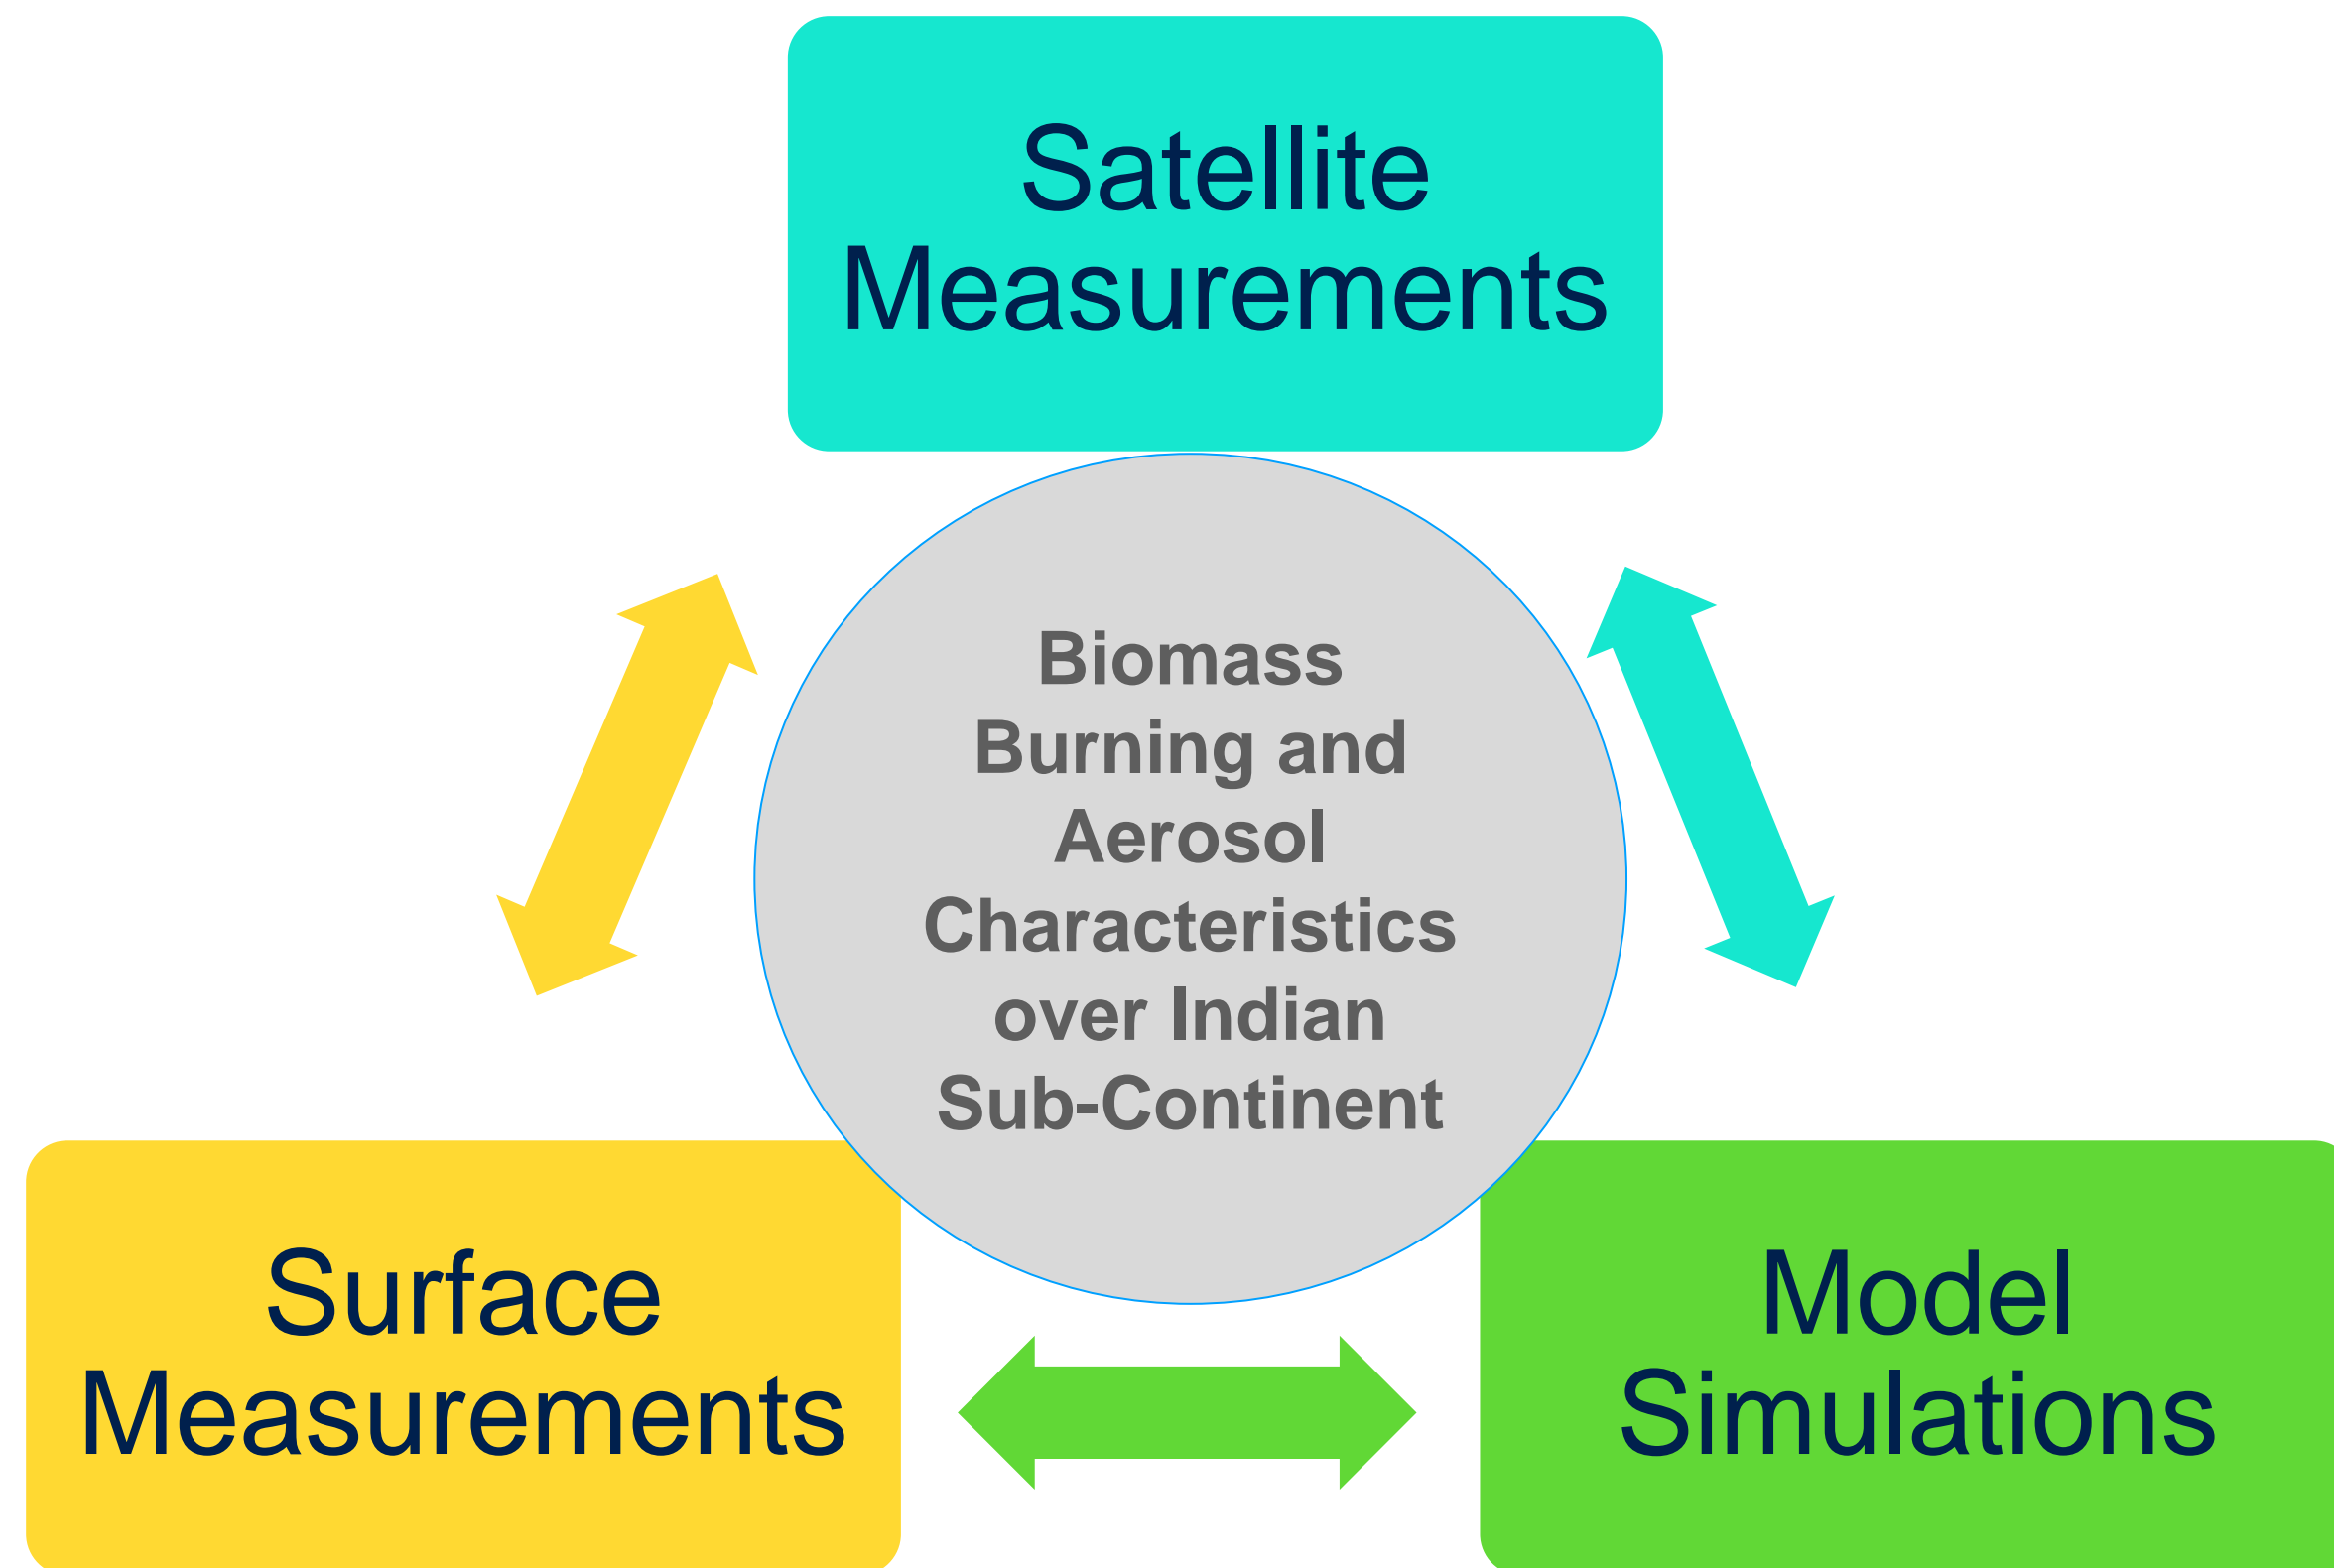

Real-time Validation with Ground Measurement

AQE Launch

- The air quality explorer tool is launched and adopted by Thai Pollution Control Department as their official air quality forecasting in November 2020.
- The event was widely covered by Thai and international media
- SERVIR SCO continue to work with partners to improve the application including spatial resolution, accuracy and expanding domain to track transboundary pollution.
- Regular capacity building and end-user engagement activities are held in the region

Research to Application

- ✓ **Research** - This effort was funded (PI – Gupta) through NASA’s Research Opportunities in Space and Earth Science (ROSES-2017) Program Element A.37: “The Science of NASA’s Terra, Aqua, and Suomi NPP.
- ✓ **Scaling** - We took research and data developed under this project over India and scaled the approach over Thailand in partnership with NASA SERVIR and Thai Pollution Control Department

Special thanks to SERVIR SCO Team (Githika Tondapu, Amanda Markert, Francisco Delgao), SERVIR Mekong, and PCD teams

NASA HAQAST

Dr. Tracey Holloway

EARTH SCIENCE APPLICATIONS WEEK 2021

Our mission is to bring the power of NASA
science down to earth and deliver it into your hands.

Overview of NASA HAQAST

The NASA Health and Air Quality Applied Sciences Team

3rd Generation; 2021-2025

Tracey Holloway, Team Lead, University of Wisconsin—Madison

What is “hay-kast”?

- Health and Air Quality Applied Sciences Team
- NASA-funded Applied Sciences Team
- 4 year initiative through 2025
- 14 Members and 70+ co-investigators
- Mission: Connect NASA science with air quality and health applications
- ~ \$12+ Million Total Cost
- Three types of work:
 - Member projects
 - Tiger team projects (collaborative)
 - Outreach, engagement, rapid response

NASA WORLDVIEW VIDEO TUTORIAL NOW AVAILABLE

Watch HAQAST's NASA Worldview video tutorial, produced by the NASA HAQAST Communications Team

HOW SHOWS HOW BREATHES

... of NH₃

HAQAST1:
2011-2016

HAQAST2: 2016-2020
HAQAST3: 2021-2025

The team structure fundamentally changes outcomes.

- Increased visibility of work and resources to end-users
- Culture to support and promote collaborations and synergies
- Growth of two-way dialogue
- Increased collaborations to meet stakeholder needs
- Rapid spin-up of high-value activities

HAQAST Supports Two Types of Projects: Individual & Tiger Team
